# **FOREWORD**

We publish this update to our Noise Action Plan at an exciting time for Stansted Airport. With an investment of £80m in our terminal facilities we are determined to provide an outstanding customer experience as we aim to provide the facilities and services that will ensure that we meet our aim to be the best London airport.

Our route network continues to grow now serving over 150 destinations and with long term partnerships established with key airline partners we are confident that passenger numbers will continue to grow.

Firmly established as one of the UK's principal international gateways and a key driver of the regional economy we are pleased to play our part in the current review of UK airport's policy. We look forward to supporting the Airports Commission, chaired by Sir Howard Davies, to ensure that we make best use of the Airport capacity that we already have available and that, in the longer term, London and the south east continues to have access to the air services that are so vital to our economic development and our modern way of life.

Noise is an inevitable consequence of aircraft operations and we have long recognised that, particularly for those who live closest to our airport, noise can be intrusive and disruptive. It is our responsibility to ensure that we work with our partners including airlines and air traffic control to ensure that we do all within our power to minimise the effects of aircraft noise. Our work to date has shown some success with noise complaints falling by over 95% since 2006. We are not complacent though and the review and update of our noise action plan has provided an ideal opportunity to ensure that we continue to implement a best in class programme of noise mitigation.

We believe that open and transparent measurement and reporting is important and we will continue to offer direct access to our flight information and to work with our local communities to ensure that we provide information that is accurate, timely and accessible.

We will continue to take advantage of new techniques and technology and in this updated plan we describe the potential of new precision navigation technology using satellite guidance, which will help us to make sure that aircraft fly our noise preferential flight paths with increased accuracy and consistency.

Our noise action plan will continue to develop and evolve in light of new opportunities, including the progressive introduction of a new generation of quieter and more fuel efficient aircraft. It is also important that we continue to respond to our local setting and to address the views and concerns of our local community as we continue to bear down on noise by working constructively together.

#### Andrew Harrison

Managing Director, London Stansted Airport.

# INTRODUCTION

Airports bring a wide range of economic, social and environmental effects, both positive and negative. Airports are important economic generators, providing jobs, encouraging inward investment and boosting local tourism.

There are however environmental impacts, particularly for those living close to airport, noise remains a significant issue.

Limiting and where possible reducing noise impact is a long standing commitment within Stansted Airport Limited's (STAL) corporate responsibility agenda and is aligned with the Government's objectives in its 2013 Aviation Policy Framework (APF), which seeks to limit and where possible reduce the number of the people in the UK significantly affected by aircraft noise. This is critical to maintaining Stansted Airport's permission to grow. In 1993, Stansted Airport became a designated airport empowering the Government to introduce noise controls to mitigate the effect of aircraft landing or taking off. Our commitment and approach is further endorsed by the achievement in 2005 of the ISO 14001 environmental accreditation, which includes the management of air and ground noise. We have maintained this accreditation to date.

Following the European Union Environmental Noise Directive 2002/49/EU (END) transposed into The Environmental Noise (England) Regulations 2006 (as amended), airports with over 50,000 movements per year are required to produce Noise Action Plans. The Airport operator is the competent authority for drawing up the Action Plan. For Stansted Airport, this authority is Stansted Airport Limited (STAL). Government guidance states that Noise Action Plans are designed to assess existing noise control measures and take appropriate action to improve upon these where appropriate. This includes noise from departing and arriving aircraft at the Airport, and will include further noise reduction measures if necessary.

Stansted Airport has developed its Noise Strategy to take into account this new requirement and has developed this Noise Action Plan and subsequent revision accordingly. To assist readers, a full glossary of terms is contained within Appendix B.

### The Stansted 2013-2018 Noise Action Plan

In 2009, STAL first developed and consulted upon its draft Noise Action Plan in line with the Environmental Noise Directive and the published regulations. Following consultation with a range of stakeholders and the local community we published the Noise Strategy and Action Plan. It set out how we managed and where possible reduced the impact of noise from aircraft at Stansted Airport over a five year period from the date of UK Government approval. This plan has now been updated for the period 2013-2018, is aligned with the END 5 year cycle and is now being consulted upon again. This update has been commented upon by the Airports Consultative Committee Subgroup, the Environmental Issues Group (EIG).

The Plan includes actions which relate to developing the Airport within its current planning permission and in line with the guidance provided by DEFRA. It makes reference to:

- Noise created by aircraft approaching, taking off from the Airport, taxiing aircraft and engine testing carried out within the Airport perimeter.
- The necessary dB Lden noise contours 2006, published for Stansted Airport by DEFRA and the most recently produced contours from 2011
- Responses received from the consultation of our draft Plan and this subsequent revision.

STAL has extended the scope of this Plan by setting actions which seek to address the impacts of aircraft noise in areas beyond the specified contours. Noise created by ground based transportation is covered by our Airport Surface Access Strategy.

# The Stansted Airport Surface Access Strategy (ASAS)

STAL manages the impacts of vehicular traffic through its Airport Surface Access Strategy. This aims to reduce reliance on the car and to increase the use of more sustainable public transport modes. The first ASAS was published in 1999, with the latest Strategy being published in 2008.

Stansted Airport has achieved a leading position with the highest proportion of passengers travelling by public transport of any major UK airport and is in the top quartile of UK companies who have measured and reduced the number of staff vehicles arriving per hundred employees.

The Strategy is intended to:

- Set out a clear framework for the development of surface access to support the Airport development to 2015 for the Generation 1 Development
- Contribute significantly towards our corporate sustainability and climate change agenda's
- Provide the framework to set challenging targets for surface access.

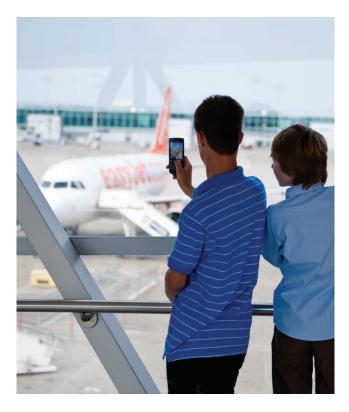

Through this Strategy of reducing the proportion of private vehicles using the Airport we expect the impacts of vehicular borne noise to be mitigated. However, noise relating to surface transport is mainly dealt with separately under government legislation and does not fall within the responsibility of airport operators. For information, please see noisemapping.defra.gov.uk

# STANSTED AIRPORT

Stansted Airport is London's third largest international airport primarily serving London, the East of England and the South East. In 2012, it handled over 17.5 mppa.

It covers an area of 957 hectares and is located approximately 65 kilometres north-east of London, and 50 kilometres south-east of Cambridge. Land surrounding the Airport is predominantly arable agricultural land, interspersed with dwellings and farmhouses.

Towns in the vicinity of the Airport include Bishop's Stortford, located 3.5 kilometres to the west and Great Dunmow approximately 8 kilometres to the east. Nearby villages include Stansted Mountfitchet, Molehill Green, Bamber's Green, Takeley, Takeley Street, Birchanger, Burton End, Tve Green and Gaunt's End.

The Airport has one operational runway and a single main terminal building located to the south of the runway. To the north of the runway, a number of general aviation companies operate from their own facilities.

The main runway is known as '04/22' (based upon compass bearings). It is 3,048m in length and is equipped with a Category 3b instrument landing system. Over 90 different aircraft types served the Airport with the overwhelming types being twin engine, medium sized, narrow bodied passenger aircraft such as the Boeing 737-800 and the Airbus A319.

Over recent years we have welcomed the introduction of modern, quieter and more efficient aircraft such as the Boeina 777 and 747-8F. These new aircraft bring all the technological enhancements of recent engine and airframe design. We will closely monitor their operation and work with our Operators to fully realise the benefits of these new quieter aircraft.

# Stansted's development

Stansted Airport's origins date back to the Second World War when the Airport was built to provide an airfield base for the United States Army.

The modern airport includes the iconic terminal building opened in 1991, having been granted planning permission in 1985. The permission granted was an initial phase of 8 million passengers per annum (mppa), a second permission of 15 mppa and a third permission of 25 mppa.

In October 2008, the Secretary of State approved the Generation 1 planning application for growth up to 35 mppa along with a series of conditions and obligations. These conditions restrict passenger numbers up to 35 mppa, air transport movements to 264,000 and the area within the 57dB LAea noise contour to 33.9 square kilometres.

# Airport use

Back in 2009, when this Noise Action Plan was first developed, Stansted Airport handled, on average, approximately 400 flights per day in the winter period and 500 flights per day in the summer period – these being evenly split between departures and arrivals.

In 2009, there were 20 scheduled and charter passenger airlines flying to over 140 destinations. The total Air Traffic Movements (ATM's) for 2009 were 156,242.

The Airport serves a catchment area of over 46 million people in the East of England, London and the wider South East. Over 3 million business passengers use Stansted Airport each year. In 2009, over 199 companies and agencies were located on-airport; employing over 10,800 people, 81% of whom live in Essex and Hertfordshire.

In 2012, Stansted Airport handled 131,324 Air Traffic Movements (ATMs) with approximately 400 flights per day in the winter period and 450 flights per day in the summer period - these being evenly split between departures and arrivals. Due largely to the effects of the global recession, the Airport has seen a decline in passenger numbers since the publication of the last noise action plan. Under new dynamic ownership and with improving economic conditions, passenger numbers have begun to increase again, by 1.5% in the last 12 months, increasing moving annual totals to 17.6 million passengers

The airport is a key catalyst for growth and productivity in the East of England, employing over 10,200 people across 190 companies and contributing over £700 million Gross Value Added to the UK economy.

We currently fly to over 150 destinations across Europe and North Africa and are the second busiest point of entry for non-UK residents arriving by air. In addition, Stansted is the third largest cargo hub in the UK and in 2012 handled 214,000 tonnes of cargo, helping to connect local companies to the global market place.

# THE REGULATION OF AIRCRAFT NOISE IN THE UK

There are four main tiers of regulation which govern aircraft noise in the UK: International, European, National and local.

The following diagram summarises the tiers of aircraft noise regulation affecting operations at Stansted.

# International regulation

The International Civil Aviation Organisation, (ICAO), is a specialised agency of the United Nations, created with the signing in Chicago, on 7 December 1944, of the Convention on International Civil Aviation. It aims to develop the principles and techniques of international civil air navigation and foster the planning and development of international air transport.

One of ICAO's chief activities is the establishment of international standards, recommended practices and procedures regarding the technical fields of aviation, including aircraft noise. After a standard is adopted, it is put into effect by each ICAO member state in its country. ICAO has set progressively tighter certification standards for noise emissions from civil aircraft, known as chapters. The chapters set maximum acceptable noise levels for different aircraft during landing and take-off. For example aircraft falling within chapter 2 have been banned from operating within the EU since 1st April 2002, unless they are granted specific exemptions. The vast majority of civil aircraft now operating fall within Chapters 3 and 4, which are quieter than the previous Chapter 2 aircraft.

All new aircraft manufactured from 2006 onwards must meet the requirements of Chapter 4. The standard for Chapter 4 has been set at 10dB cumulative margin below that of Chapter 3. Further details regarding these standards can be found at www.icao.int/environmental-protection/Pages/noise.aspx

ICAO also requires member states to adopt a "balanced approach" to aircraft noise management. This balanced approach considers:

- Reducing aircraft noise at source
- Land planning use
- Changes to operational procedures
- Restrictions on the use of the noisiest aircraft

This approach has been adopted through the various strategies in this Action Plan. Further details of the ICAO "Balanced Approach" can be found at www.icao.int/env/noise.htm

# European regulation

The European Union (EU), through the European Civil Aviation Conference (ECAC), is working towards a common aviation policy in Europe. The EU has issued various directives relating to the management and control of environmental issues and is increasingly assuming responsibility for the regulation of aircraft noise standards. Member States are obliged to comply with the requirements of the directives and incorporate them into national legislation.

The relevant directives for aircraft noise management are:

EC Directive 2006/93/EC - This revised directive banned Chapter 2 aircraft from landing in the EU.

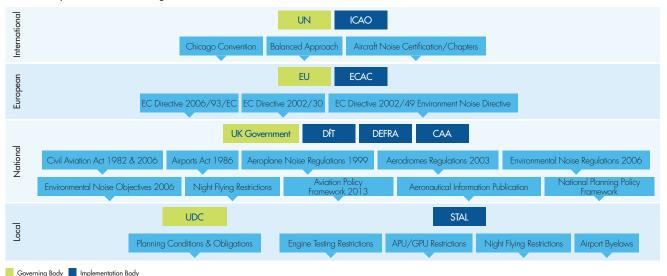

EC Directive 2002/30 - This directive has:

- Introduced discretionary powers to restrict the operation of marginally compliant Chapter 3 aircraft, where circumstances support this measure
- Requires the publication of environmental noise objectives for the Airport
- Requires the adoption of a balanced approach to noise management, including the four elements agreed by ICAO.

# EC Directive 2002/49 ("Environment Noise Directive")

This directive required Member States to create noise maps from all transport sources in urban areas, and major sources outside, by 2007 and to adopt action plans to manage noise by 2008. The directive also aims to harmonise methods for measuring and determining noise impacts across the EU. This has required us to produce this Noise Action Plan.

#### Stansted Airport Aircraft Noise Regulations

# THE REGULATION OF AIRCRAFT NOISE IN THE UK

# National regulation

The current UK Government published its Aviation Policy Framework (APF) in March 2013 this plan has been reviewed in light of any policy changes since the December 2003 Future of Air Transport White Paper was replaced by the new APF. The UK government ratify Acts of Parliament and regulations which address aircraft noise. The relevant legislation is detailed below:

The Civil Aviation Acts 1982 and 2006 – the 1982 Act gave the UK government powers to introduce noise controls to limit or mitigate the effect of noise and vibration from aircraft landing or taking off at designated airports, defined as Heathrow, Gatwick and Stansted, (Stansted from 1993). These powers were widened by the 2006 Act, which permits an airport authority to charge aircraft operators for the noise and emissions generated close to the Airport. These powers are regulated on behalf of the UK government by the Department for Transport, (DfT). At Stansted we have introduced differential charges to incentivise the use of quieter and cleaner aircraft. These are available at www.stanstedairport.com in a document entitled "conditions of use".

Airports Act 1986 – This Act gives power to the Secretary of State to make orders if it appears that the existing runway capacity of the Airport is not fully utilised for a substantial proportion of the time during which it is available. It includes powers to limit the number of occasions on which aircraft may land or take off at an airport and schemes to allocate airport capacity.

The Environmental Noise (England) Regulations 2006 (as amended) – These regulations turn EU directive 2002/49 (Environment Noise Directive) into UK law. They place a duty on the Secretary of State to produce strategic noise maps for the three London Noise Designated Airports following which those airport operators must produce Noise Action plans. Once prepared and adopted, the noise action plans must be reviewed and, if necessary, revised, at least every five years and whenever a major development occurs affecting the noise situation.

The Aerodromes (Noise Restrictions) (Rules and Procedures)
Regulations 2003 – These regulations turn EU Directive
2002/30 into UK law. They apply to major airport operators
with over 50,000 civil jet aircraft movements a year and reflect
the adoption of the ICAO balanced approach to managing
aircraft noise. Additionally, the regulations define procedures

which airports should follow when considering operating restrictions based on aircraft noise.

Aeroplane Noise Regulations 1999 – These regulations define the noise certificate requirements for both propeller and jet aeroplanes registered in the UK. It ensures that no aircraft can land or take off in the UK without a valid noise certificate. The regulations are based on the noise certification standards and limits issued by ICAO, (eg. Chapter 3 and 4 aircraft). They also provide a list of aircraft that are exempt from the ICAO noise certification.

Aircraft Night Noise Regulations – The present regime of Night Flying restriction for the three London Designated Airports ended in October 2012. The Government extended this regime by two further years to enable adequate time for consultation ahead of any subsequent regime. In early 2013 the Government consulted on a new night flying restrictions regime, as a call for evidence. Stage two if this consultation will be undertaken towards the end of 2013 and subsequent Night Noise Objectives for the three noise designated airports will be published during 2014 for a 3 year period ensuring the Government has time to act on the recommendations of the Airports Commission.

Details of the 2006 night flying regime included objectives to:

- Minimise sleep disturbance resulting from overflight of the noisiest types of aircraft
- Mitigate the effects of noise, in particular sleep disturbance. This will be done by encouraging the Airport to adopt night noise related criteria in order to determine which residents of domestic or noise sensitive premises should be offered insulation schemes
- To limit the 6.5 hour 48dBA Leq contour (for the winter and summer seasons combined) to 38km² by 2011-2012.

### Aeronautical Information Package (UK AIP)

This provides specific controls for managing aircraft noise at each UK airport, formed as a result of the Acts and regulations discussed. These controls cover aspects such as Continuous Descent Approaches (CDAs), Noise Preferential Routes (NPR's), noise abatement procedures and night flight restrictions. A copy of the UK AIP for Stansted Airport detailing the Noise Abatement Procedures can be found at www.nats-uk.ead-it.com/aip/current/ad/EGSS/EG\_AD\_2\_EGSS\_en.pdf

#### Planning Policy

It is important that the planning system is able to prevent the encroachment of noise-sensitive development, in particular residential dwellings into noisy areas. The National Planning Policy Framework (NPPF) now provides general advice on how planning policies and decision on planning application should take into account noise. It states:

Planning policies and decisions should aim to:

- Avoid noise from giving rise to significant adverse impacts on health and quality of life as a result of new development;
- Mitigate and reduce to a minimum other adverse impacts on health and quality of life arising from noise from new development, including through the use of conditions;
- Recognise that development will often create some noise and existing businesses wanting to develop in continuance of their business should not have unreasonable restrictions put on them because of changes in nearby land uses since they were established: and
- Identify and protect areas of tranquillity which have remained relatively undisturbed by noise and are prized for their recreational and amenity value for this reason.

This policy has simplified and replaced much more detailed guidance that was provided in previous national policy on planning and noise in Planning Policy Guidance Note 24.

Sustainable Aviation will be working closely with the Government to develop more detailed planning auidance for Local Authorities and we welcome this initiative

#### Environmental noise objectives

In June 2006, the Secretary of State published long term statutory environmental noise objectives for Heathrow, Gatwick and Stansted airports.

Long term statutory noise objectives for Stansted Airport are:

- Progressively to encourage the use of guieter aircraft at night while allowing overall growth of the Airport as envisaged by the 2003 Future of Air Transport White Paper
- To limit the overall noise from aircraft during the night quota period close to existing levels while permitting expansion of the Airport's overall traffic in line with 2003 White Paper objectives, and

To meet noise-abatement objectives as adopted from time to time.

#### **Noise Research**

A major study of attitudes to aircraft noise in the UK was reported in 1985. This was known as the "ANIS" study (United Kingdom Aircraft Noise Index Study). The results informed a policy that the "onset of significant annoyance" occurred at a noise level of 57dBLAEQ, 16h. Given the passage of time Government came to the view that a further major study was needed to consider the relationship between aircraft noise and disturbance and in 2007 the 'ANASE' study (Attitudes to Noise from Aviation Sources in England) reported. Following comments from peer review, Government concluded that the results from ANASE were not sufficiently robust to adopt a change in policy and significant weight continues to be accorded to the noise level of 57dBIAEQ. 16h.

With the publication of the Aviation Policy Framework in 2012. Government has confirmed that within an overall policy objective to 'limit and, where possible, reduce the number of people in the UK significantly affected by aircraft noise' the 57dBLAeg, 16h contour will continue to be considered as the average level of daytime aircraft noise marking the approximate onset of significant community annoyance.

# Local regulation – airport planning conditions and obligations

As well as government leaislation, additional noise-related controls are introduced by local planning authorities as part of the planning system. At Stansted Airport these conditions and obligations include restrictions of use of Auxilary Power Units (APU's), Ground Power Unit's (GPU's), the ground running of aircraft engines and the maximum noise contour size.

These are:

#### Air noise conditions

The planning permission for the G1 development includes conditions which limit the Airport to 35 mppa and limits on the number of passenger air transport movements, cargo air transport movements and non air transport movements of 243,500, 20,500 and 10,000 respectively. The G1 planning permission also limits the area enclosed by the 57dB(A) Leg 16hr (07:00-23:00) noise contour to 33.9 sqkm.

#### Ground noise obligations

Stansted Airport has a number of \$106 obligations relating to around noise control as detailed below:

- From the Implementation Date to issue and maintain the continuance of Director's Notices to the effect that
- The use of Air Start units, Ground Power Units, Air Conditioning units or any other items of ground servicing equipment which does not conform to current EU standards for noise suppression (85 decibels dBA at 7 metres) is prohibited on any apron area at Stansted
- Ground Power Units must not be used at Stansted when there is serviceable FEGP available on stand
- To use all reasonable endeavours to have FEGP available for use at all times where it is installed
- Except in the circumstances set out in this paragraph APUs are not to be used where Fixed Electrical Ground Power (FEGP) is adequately provided and serviceable. The restrictions will be relaxed where:
  - The outside air temperature is below +5°C or above +20°C and FEGP is unserviceable or not installed on the stand
  - Systems that cannot be powered by FEGP require to be powered up for maintenance purposes, subject to prior permission being obtained from STAL
  - An aircraft has to be positioned on a stand equipped with FEGP, in such a manner as to make use of the FEGP system impractical (typically small cargo aircraft parked side-on or nose-out on stand)
  - An aircraft type is not compatible with the FEGP system. at Stansted, or has a temporary technical fault preventing the use of FEGP
  - An aircraft has night-stopped at Stansted (minimum groundtime of 2hrs) and is operating its first departure of the day and APU's can be run for a maximum of 45 minutes before departure subject to prior permission by STAL
  - Where the captain of an aircraft believes that genuine hardship to passengers will result unless the APU is run, then he/she may do so provided that STAL is contacted before starting.

# RESULTS OF NOISE MAPPING

In developing the Noise Action Plan, the Department for Environment, Food and Rural Affairs (DEFRA) provided airports with an 'Action Planning Data Pack'. This data is subject to Crown Copyright 2009. The contents of the Action Planning Data Pack were detailed in the "Guidance for airport operators to produce action plans under the terms of the Environmental Noise (England) Regulations 2006 (as amended)". This update includes the details of a further datapack consisting of the results of the 2011 mapping.

This was designed to provide a description of the current noise impact of the Airport on its surroundings.

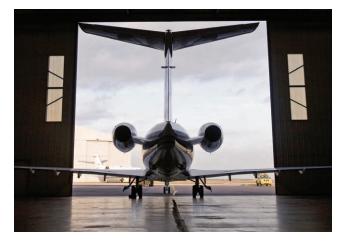

We have shown the results of the 2006 noise mapping. which includes the estimated number of people and dwellings exposed above various noise levels from aircraft using Stansted Airport. We have included data from Lday, Levening, Lnight, Lden and Leg noise maps in Tables 1-5. We have considered this data as well as our current noise mitigation measures in formulating our Noise Action Plan. We have since added the 2011 noise mapping data in this updated noise action plan and will comment on this data as appropriate.

# 2006 noise data

For safety reasons aircraft must takeoff and land into the wind. In 2006, the prevalence of westerly winds mean that approximately 66% of aircraft arrivals come from the east, and approximately 66% of departures are to the west.

Additionally, departing aircraft must remain within the Noise Preferential Routes (NPR) (3 at either end of the runway) (Appendix D) until they have reached a minimum altitude to be vectored by Air Traffic Control (ATC), or as instructed otherwise. The effect of the wind direction and NPR's is seen in the shape of the noise contour maps (Appendix C).

The 55dB Lden contour map (Appendix C) shows that the noise contour extends further to the northeast to include Thaxted and Great Sampford, due to the prevalence of westerly operations during 2006. It also extends south west of the Airport, to the western edge of Sawbridgeworth but not including Harlow. The widening of the contour around Little Hallingbury shows the bias towards the southwesterly departure operations along the Dover (DVR) and Clacton (CLN) routes. The 60dB Lden

contour is considerably smaller, extending from Thaxted to just before Sawbridgeworth. The 65 and 70dB Lden contours show similar reductions in size, with the 75dB Lden contour falling predominantly within the Airport Boundary.

The Lnight contour map has a similar shape to the Lden contour. The dB bands are grouped differently to reflect the different timescale. The 48dB contour, like the 55lden, extends from the southwest of Sawbridgeworth to the north east including Thaxted, but not Great Sampford. The 57dB contour extends southwest just past the M11 to Broxted in the north east. The 66dB contour is contained almost entirely within the Airport Boundary. Again, the shape of these contours are affected by the prevalence of south westerly operations.

The number of dwellings and population above various noise levels is shown in Tables 1-5. This data has been rounded to the nearest 50, except when the number of dwellings is greater than zero but less than 50, in which case the total has been shown as "<50". The associated population has been rounded to the nearest 100, except when the associated population is greater than zero but less than 100, in which case the total has been shown as "<100".

### 2011 noise data

During 2011 the split of air transport movements using our runway was considerably different to 2006 due to the predominant southwesterly wind direction. This resulted in a greater use of runway 22, approximately 74%, with aircraft departing to the southwest and arriving from the northeast.

Both the contours shown are much smaller in 2011 compared to 2006 and again, the effect of the wind direction and NPR's is seen in the shape of the noise contour maps (Appendix C).

The Lden 55dB contour map shows that the noise contour extends further to the northeast to include Thaxted and Great Sampford, due to the prevalence of westerly operations during 2011. The extension of the contour area past Sawbridgeworth has disappeared due to less runway 04 arrivals, with runway 22 departures are still shown to extend the contour towards Hatfield Heath mirroring the Dover and Clacton NPR's.

The 60dB Lden contour area is considerably less than the 2006 contour. This does not now include Little Hallingbury to the southwest or Thaxted to the northeast. The 65 and 70dB Lden contours show similar reductions in size, with the 75dB Lden contour almost entirely falling within the Airport Boundary.

The Lnight contour map (Appendix C) shows a similar scalable reduction in size to that of the Lden map. As before, the dB bands are grouped differently to reflect the different timescale. The 48dB contour, like the 55lden, has changed shape with the prominent runway 22 southwesterly operational bias during the year extends from the southwest of Sawbridgeworth to the north east including Thaxted, but not Great Sampford.

Again, the number of dwellings and population above various noise levels is shown in Tables 1-5. This data has been rounded to the nearest 50, except when the number of dwellings is areater than zero but less than 50, in which case the total has been shown as "<50". The associated population has been rounded to the nearest 100, except when the associated population is greater than zero but less than 100, in which case the total has been shown as "< 100"

# SECTION FOUR

# RESULTS OF NOISE MAPPING

Table 1: Estimated total number of people and dwellings above various noise levels, Lden

	2006			2011		
Noise level (dB)	Area (km²)	Number of dwellings	Number of people	Area (km²)	Number of dwellings	Number of people
≥ 55	73.3	3,850	9,400	57.5	2,950	7,400
≥ 60	28.4	850	2,100	21.3	500	1,400
≥ 65	10.1	150	400	7.4	100	300

≥ 69	2.1	<50	<100	1.5	0	0

# 2006 and 2011 Summary

Comparison of the more recent 2011 noise maps with the earlier 2006 maps, clearly shows that there has been a significant improvement in all areas. The progressive introduction of more modern and quieter aircraft types has made an important contribution to this improvement and Stansted now benefits from one of the most modern aircraft fleets in the world. A reduction in aircraft movement numbers, associated with the global economic recession, will also have been a contributory factor.

Table 4: Estimated total number of people and dwellings above various noise levels, LAeq, 16h

	2006			2011		
Noise level (dB)	Area (km²)	Number of dwellings	Number of people	Area (km²)	Number of dwellings	Number of people
≥ 54	50.0	2,350	5,700	36.5	1,800	4,400
≥ 57	28.2	750	1,900	19.6	500	1,300
≥ 60	15.4	350	900	10.0	150	400

# STANSTED AIRPORT'S NOISE STRATEGY

As a designated airport, the Government sets the policy framework which influences how STAL responds to aircraft noise issues.

Noise that the Airport generates comes from a number of sources. In managing noise at the Airport, it is important to understand who is responsible for generating the noise and who can influence that noise. A summary is shown in Table 6.

Managing and where possible, reducing noise is a long standing commitment within STAL's corporate responsibility agenda. Stansted Airport has been a designated airport since 1993 with noise levels set by the Government.

Stansted Airport sets noise targets each year and these are published in our corporate responsibility report, together with performance information against key noise indicators. Locally we also have a number of planning conditions and obligations which impose restrictions to control a range of air and ground noise impacts.

Our commitment and approach is further endorsed by the achievement in 2005 of the ISO 14001 environmental accreditation, which includes the management of air noise and we have consistently maintained this in subsequent years.

The Strategy and Action Plan within this document relates to the growth of the Airport to 35 mppa. In order to deliver our Noise Strategy and Action Plan we will continue to work collaboratively with airlines, air traffic controllers and local authorities.

### Further commitments

Since the development of the original NAP, the London Airspace Management Program (LAMP) has gained some momentum. By making increased use of the capability offered by modern technology, LAMP will seek to make airspace operations much more efficient.

At some London airports the long established but inefficient departure and arrival routes will have to be changed to enable implementation of LAMP. London Stansted will be fully engaged in the LAMP process and will engage with our local communities and the Consultative Committee during this process

In recent years there has been a growing desire to better describe the noise impacts of aircraft using metrics that are simple, clear and understandable.

The use of LAeg contours is long standing and provides, in particular, a useful benchmark for assessing longer term trends. We recognise though that there is an opportunity to use additional noise metrics to provide a more rounded picture of the impact of aircraft noise and to address some of the concerns that have been expressed to us. We will therefore work closely with our Consultative Committee to jointly develop a package of noise measures that improve our communication of noise impact.

We welcome the recent initiatives and development of Sustainable Aviation's Noise and Carbon Roadmaps. As a Council member of Sustainable Aviation we are pleased with the substantial progress that this work represents and we will implement in full those requirements that are relevant to us.

Table 6: Noise sources at Stansted Airport

Noise source	Noise source owner	Influence role
Airside vehicles	Drivers of vehicles	STAL
Landside vehicles	Passengers, passenger transport companies, freight and logistic transport companies.	STAL
Building infrastructure	STAL and other airport building owners.	STAL
Aircraft engines	Engine manufacturers	Airlines, CAA, STAL
Aircraft airframe	Aircraft manufacturers	Airlines, CAA, STAL
APU's	APU manufacturers	Airlines, STAL
GPU's	GPU manufacturers	Ground handling companies, STAL
Aircraft engine testing	Airlines	STAL
Construction activities	Construction company	STAL
Approach	Aircraft and engine manufacturers	Airlines, CAA, NATS, STAL
Landing	Aircraft and engine manufacturers	Airlines, CAA, STAL
Taxi	Engine manufacturers	NATS, STAL
Take Off	Aircraft and engine manufacturers	Airlines, CAA, NATS, STAL
Climb out	Aircraft and engine manufacturers	Airlines, CAA, NATS, STAL

#### SECTION FIVE

# STANSTED AIRPORT'S NOISE STRATEGY

At Stansted Airport, we believe from the evidence of benchmarking studies and our long standing status as a designated airport, that we have a full and comprehensive range of noise management measures already in place. Our current expenditure on noise related activities is shown in Appendix H. However, we are not complacent about finding new ways to mitigate noise or to enhance our existing measures.

Our Noise Strategy and Action Plan will address nine key themes over the next five years. These are:

- 1 Control of noise generated from departing aircraft
- 2 Control of noise generated from arriving aircraft
- 3 Control of aircraft noise generated by ground operations
- 4 Night noise restrictions
- 5 Mitigation schemes
- 6 Monitoring and reporting
- 7 Policy and planning
- 8 Continuous improvement
- 9 Communication

For each theme we have reviewed our current Strategy and activities and set out how these will be developed through this Noise Action Plan.

# 5.1 Control of noise generated by departing aircraft

Our Strategy and activities that we currently undertake are:

#### Departure track procedures

### Noise preferential routing "Track Keeping"

Aircraft departing from Stansted Airport are required to follow specific paths called noise preferential routes (NPRs) up to an altitude of 4,000ft, unless directed otherwise by air traffic control (ATC). NPRs were designed to avoid overflight of built-up areas where possible. They lead from the take-off runway to the main UK air traffic routes, and form the first part of the Standard Instrument Departure routes (SIDs).

At Stansted Airport there are three NPR's at each end of the runway namely Clacton (CLN), Dover (DVR) and Buzad (BZD). Associated with each NPR is a swathe of air space extending 1.5km each side of the nominal NPR centre line, within which aircraft are considered to be flying on track. This takes account of various factors that affect track-keeping including tolerances in navigational equipment, type and weight of aircraft, and weather conditions.

After reaching 4,000ft at any point along an NPR, an aircraft may be turned off the route by ATC onto a more direct heading – a practice known as 'vectoring'. ATC may also vector aircraft from NPRs below 4,000ft for safety reasons, including certain weather conditions, for example to avoid storms. ATC may vector Aircraft on the BZD departure routes at 3,000ft above sea level (QNH) during the hours of 06:00-23:30, outside of these times the 4,000ft restriction applies.

Changes in the NPR structure are rare and stability is regarded as important, so that people may know where aircraft noise will be experienced. The frequency with which any particular NPR is used will vary, and is an operational decision for ATC. These take into account the final destination of individual flights. A map illustrating the current NPRs is provided in Appendix D.

Stansted Airport has an existing target of 95% of all departing aircraft to remain within each designated NPR. To encourage greater adherence to the NPR's and to avoid the over-flight of sensitive areas we fine aircraft that fly "persistently" outside the NPR's, and direct all funds to the Stansted Airport Community Fund. The surcharge level in 2009 was £500 per infringement and in 2008 we collected and distributed £5,000. As part of existing the commitments since the formal adoption of this plan in 2011, STAL has raised the fine levels for track keeping during the daytime and doubled the fine level for night time departures that flagrantly or persistently fly off-track. As part of existing commitments since the formal adoption we are also committed to reviewing these fine levels again in future years.

#### "1000ft rule"

Within the UK AIP, after take-off of an aircraft it states that it shall be operated in such a way that it is at a height of not less than 1,000ft above aerodrome level (aal) at 6.5km from the point an aircraft starts its take off roll. We will continue to work with our airlines to ensure this is achieved

#### Departure noise limits

At Stansted Airport we have eight fixed noise monitors which are located at either end of the runway (4 at each end). The location of the monitors also takes account of the noise preferential routes.

There are specific noise limits applied at these fixed noise monitors for departing aircraft. During the night quota period (23:30-06:00) the departure noise limit is 87dBA Lmax (maximum noise limit measured in decibels).

During the remainder of the night period (23:00-23:30 and 06:00-07:00) the noise limit is 89dBA Lmax. These night flying time limits are consistent with the DfT night restrictions regime. There is also a daytime noise limit of 94dBA Lmax.

Relating the noise limits to a reference distance 6.5km from start-of-roll encourages aircraft operators to gain height as quickly as possible and then reduce engine power and noise at the earliest opportunity.

STAL fines airlines whose aircraft breach the noise limits, and the money is given to local community projects through the Stansted Airport Community Fund. STAL introduced a tiered fining mechanism in 2011 starting at £1000 per infringement. This scheme is weighted so those who exceed any noise limit by more than 3dB pay an additional fine per dB or part thereof, with a weighting for night operations.

The various departure noise limits at Stansted, for day, night and shoulder periods, are set by the UK Government. We will work closely the Government's advisory committee, ANMAC, to review and amend these levels as appropriate in light of the best available evidence.

In addition to the current activities we plan to introduce three new activities in our Action Plan which cover further monitoring of the areas as documented in section 2.21 - NOISE ABATEMENT PROCEDURES of the UK AIP"

- We will continue to work with Airlines and NATS to ensure that all six departure Noise Preferential Routes exceed a 95% on-track performance target until they have achieved the minimum vectoring height of 4,000ft (3,000ft BZD routes 06:00-23:30)
- We will continue to fine aircraft that fly persistently outside the Noise Preferential Routes and increase this charge by the end of 2011 and a further review of fine levels in 2016.
- We will introduce a tiered fining level starting at £1.000 per infringement, up to 3dB over the 94dB daytime limit. For Infringements that exceed this 3dB threshold we will add £250 per dB
- We will set up our noise and track keeping system to monitor overflights of Bishop's Stortford, St Elizabeths Hospice, Sawbridgeworth and Stansted Mountfitchet
- We will continue to monitor aircraft that do not meet the 1.000ft criteria as described in the UKAIP EGSS. AD 2.21 Noise Abatement Procedures (3(1)) and work with airlines through the NTKWG to reduce the number of infringements
- In order to help clarify the trade-off between noise and emissions on departure, we will lobby through ANMAC to clarify guidance for aircraft operators regarding use of Noise Abatement Departure Procedures (NADP) at Stansted Airport
- We will work with NATS and the CAA to establish SLA's to respond to suggestions for improved flight procedures
- We will review Stansted's departure noise limits through the Government advisory committee, ANMAC.

#### SECTION FIVE

# STANSTED AIRPORT'S NOISE STRATEGY

# 5.2 Control of noise generated from arriving aircraft

Nationally, there are no arrivals noise limits. A report which considered the feasibility of setting noise limits for arriving aircraft, 'Noise from Arriving Aircraft: Final Report of the ANMAC Technical Working Group', was published in 1999. In light of the findings, the then Aviation Minister decided against imposing operational noise limits for arriving aircraft.

However, Stansted Airport undertakes the following activities to limit the impact of arriving aircraft and the resultant noise:

#### Arrival track procedures

# Continuous Descent Approach (CDA)

The continuous descent approach is the way in which aircraft reduce their height when preparing to land at Stansted to minimise noise impacts.

The following is an extract from the UK AIP instructing pilots to use Continuous Descent Approach (CDA) wherever possible. "Where the aircraft is approaching the aerodrome to land it shall commensurate with its ATC clearance minimise noise disturbance by the use of continuous descent and low power, low drag operating procedures (referred to in Detailed Procedures for descent clearance in AD 2-EGSS-1-13 of the UK AIP 2.21). Where the use of the procedures is not practicable, the aircraft shall maintain as high an altitude as possible."

Stansted Airport Limited monitors and reports CDA's for all arriving aircraft on Runway 22 (Westerly) approach in the following way:

For monitoring purposes, a descent will be deemed to have been continuous provided that no segment of level flight longer than 2.5 nm occurs below 6,000ft QNH and 'level flight' is interpreted as any segment of flight having a height change of not more than 50ft over a track distance of 2 nm or more, as recorded in the Airport Noise and Track Keeping System'.

Stansted Airport has an agreed target with the National Air Traffic Service (NATS) that 90% of all arriving aircraft on Runway 22 will operate within the CDA criteria.

The CDA compliance levels are regularly reported back to the Airports' Noise and Track Keeping Working Group and Stansted Airport Consultative Committee (STACC) as well as the Flight Operations Committee (FOC), which includes airline and ATC representatives.

At present we only measure CDA's on the Runway 22 approach (Westerly), but as part of our Action Plan we will investigate how we can introduce a target for compliance on the Runway 04 (Easterly). Currently this is not possible due to air space restrictions.

In addition to these activities already in place, in response to consultation feedback we will also engage with the local community and DfT to seek opportunities to introduce minimum heights over sensitive areas near the Airport.

#### **Joining Point**

There is a point at which aircraft intercept the instrument landing system and this is known as the Joining Point. This has minimum height and distance requirements depending on the time of day.

Between 23:30 and 06:00 hours (local time), other than relevant propeller driven aircraft, no aircraft shall descend below 3,000ft (QNH) until it is established on final approach and is less than 10 Nautical Miles from touchdown.

No propeller driven aircraft which exceeds 5700kg shall descend below 3,000ft (QNH), between 23:30 and 06:00 hours (local time), until it is established on final approach or thereafter fly below the approach path indicated by the PAPI (precision approach path indicator).

# Action plan summary

- We will continue to monitor and report the adherence to Continuous Descent Approach procedures as detailed in UKAIP EGSS AD 2.21 Noise Abatement Procedures to meet our target of 90%
- We will continue to produce monthly reports to NATS detailing the adherence to the Joining Point criteria for daytime operations as set out in the Stansted UKAIP
- We will continue to work with Airlines and NATS to encourage CDA's to Runway 04 where operationally feasible, especially during the night period
- We will work with the NTKWG to introduce Continuous. Descent Approaches to Runway 04 and report progress through the Stansted Airport Consultative Committee
- We will work with Local Communities and DfT regulators to seek opportunities for minimum heights over sensitive areas near the Airport.

### 5.3 Control of aircraft noise generated by ground operations

At Stansted Airport we have a range of measures to control ground noise. These control measures are set out in documents at the Airport called Directors Notices (DN's). These include:

- Control of Ground Noise for Fixed Wing Aircraft Engines
- Control of Ground Noise for Rotary Wing Aircraft
- APU/GPU Restrictions of Use

These DN's stipulate what areas of the Airport, and during what times these activities can take place. These include the ground running of rotary and fixed wing aircraft engines, the testing of aircraft engines on stands, the use of Auxiliary Power Units (APU) and the use of Ground Power Units (GPU). These details are recorded, monitored and used when investigating any complaints. A Directors Notice enables STAL to take an enforceable course of action if the requirements set out are breached and this is set by the Airport Bylaws.

#### Fixed Electrical Ground Power (FEGP)

Fixed Electrical Ground Power, (FEGP), is provided at all pier served stands at Stansted Airport. The benefit of FEGP is that it allows the pilot of an aircraft to turn off the Auxiliary Power Unit, (APU), which is a small engine at the back of the aircraft, therefore reducing ground noise and emissions.

A survey of FEGP usage at Stansted was undertaken in 2005 which showed that not all aircraft were turning off their APU's, whilst attached to the FEGP system. We sought feedback from pilots and ground crews as to why APU's are continually run rather than FEGP. The results were very useful highlighting issues of serviceability and sensitivity of the power supply to aircraft. However, it also highlighted a number of misconceptions and communication issues which were hindering a resolution to the problem.

Since then, STAL has run training sessions with both airlines and ground handling agents to build confidence in our FEGP system. We have investigated how other airports, such as Munich and Copenhagen have achieved 100% FEGP reliability.

In 2007, STAL was invited to Boeing in Seattle to discuss plans to modify the FEGP socket on new generation 737 aircraft. This is the first time an airport has been invited to take part in a Boeing retro fit re-design workshop. The workshop has resulted in a modification to ensure the connection does not fail after attachment.

#### Limiting the use of reverse thrust

When an aircraft lands at Stansted, in order to slow the aircraft down, the engines can use reverse thrust. To minimise disturbance in areas adjacent to the aerodrome, commanders of aircraft are requested to avoid the excessive use of reverse thrust after landing, consistent with the safe operation of the aircraft, between 23:30 and 06:00 (local time).

- We will review and update our APU usage strategy annually and implement any changes necessary to increase its use
- We will continue to monitor adherence and review the effectiveness of our stringent ground noise operational controls, as detailed in our Directors Notices.
- We will review our stand planning procedures by the end of 2011 and every two years thereafter to identify opportunities to prioritise stand allocation to minimise ground noise
- We will work with airlines to achieve 50% of all arriving aircraft using reduced engine taxi-in procedures by 2015
- We will work with airlines to achieve 90% of all aircraft turnarounds using FEGP's rather than APU's by 2015.

# 5.4 Night Noise Restrictions

#### Current night restrictions regime

The current night restrictions regime was introduced in 2006/7 following extensive consultation. The restrictions are set by the DfT and are detailed in a statutory notice published each season in the supplement to the UK AIP. As previously stated, a new set of Night Flying restrictions is currently under consultation by the UK Government to be introduced in October 2014, for a 3 year period ensuring the Government has time to act on the recommendations of the Airports Commission.

#### Night period and night quota period

The 'night period' is 23:00-07:00 hours (local time) during which period the noisiest types of aircraft classified with a Quota Count/8 (QC) and QC/16 may not be scheduled to land or take-off. Aircraft classified in QC group 4 are also subject to a mandatory scheduling ban in the night quota period. From 23:30 to 06:00 the ('night quota period') aircraft movements are restricted by a movement limit with noise quotas as a supplementary measure. These are set for each season.

### The quota count system

Aircraft are assigned quota count (QC) classifications as follows:

Certified noise level (EPNdB)	Quota count
More than 101.9	QC/16
99 – 101.9	QC/8
96 - 98.9	QC/4
93 – 95.9	QC/2
90 – 92.9	QC/1
87 – 89.9	QC/0.5
84 – 86.9	QC/0.25

Aircraft are classified separately for take-off and landing. Schedules showing the QC classification of individual aircraft are published twice a year by the CAA.

#### Exempt aircraft

Jet aircraft and propeller aircraft are exempt from the movements limits and noise quotas if their noise certification data are less than 84 EPNdB. (Effective Perceived Noise measured in Decibels)

#### Movement limits and noise quotas at Stansted

The movements limits and noise quotas for current and future years/seasons are:

, .		
	Movement limit	Quota limit
Summer 2009	7,000	4,800
Winter 2009	5,000	3,390
Summer 2010	7,000	4,750
Winter 2010	5,000	3,350
Summer 2011	7,000	4,700
Winter 2011	5,000	3,310
Summer 2012	7,000	4,650
Winter 2012	5,000	3,310
Summer 2013	7,000	4,650
Winter 2013	5,000	3,310

The summer season is the period of British Summer Time in any one year as fixed by or under the Summer Time Act 1972 (as amended by Statutory Instrument (S.I) 2002/262, the definition of British Summer Time). The winter season is the period between the end of British Summer Time in one year and the start of British Summer Time in the next. The change to British Summer Time occurs at 01:00 Greenwich Mean Time (Universal Co-ordinated Time).

# End of season flexibility

Within each season there is a degree of flexibility. This flexibility margin is 10%; ie. up to 10% of the current season's movements limit may be carried over if sufficient amount of the limit is unused and up to 10% of the next season's movements limit may be anticipated in the event of an overrun.

Any excess overrun is penalised in the following season at double the amount of the excess. The same arrangements apply to the noise quotas.

The system currently in place was due to expire in 2012. This system has now been extended for a further 2 years, retaining the Movement and Quota Limits whilst a two stage consultation is undertaken. The DfT will issue updated guidance when the consultation exercise is completed in early 2014.

#### Permitted operations

To summarise our permitted operations, these are:

- Any aircraft which has a QC value of 4, 8, or 16 may not be scheduled to take off or land during the night auota period;
- Any aircraft which has a QC value of 8 or 16 may not be scheduled to take off or land during the night period;
- Any aircraft which has a QC value of 8 or 16 may not take off in the night period, except in the period 23:00 hours to 23:30 hours in circumstances where:
  - (a) it was scheduled to take off prior to 23:00 hours;
  - (b) the take-off was delayed for reasons beyond the control of the aircraft operator; and
  - (c) the Airport authority has not given notice to the aircraft operator precluding take-off.

### **Dispensations**

The Secretary of State has the power to specify circumstances in which movements may be disregarded from the night restrictions by the Airport managers and the power to authorise that specific flights should be disregarded. The Airport companies may disregard night movements in the following exceptional circumstances:

- Delays to aircraft which are likely to lead to serious congestion at the aerodrome or serious hardship or suffering to passengers or animals
- Delays to aircraft resulting from widespread and prolonged disruption of air traffic.

#### Monitoring of night noise

Stansted Airport provides night noise information to its Airport Consultative Committee, via the NTKWG, and on a weekly basis to the Department for Transport on movements, noise quotas, details of any dispensations or exemptions granted, and reports on any movements by QC/8 and QC/16 aircraft during the night period. In addition, under section 78(4) of the Civil Aviation Act 1982 all dispensations granted by the Airports have to be reported to the Department for Transport (DfT) in writing within a maximum of one week from when the dispensed flight took place.

With in our Action Plan we have set out that we will increase fine levels for persistent off track departures and noise infringements.

# Action plan summary

- We will continue to fine aircraft that fly persistently outside the Noise Preferential Routes during the night period and increase this to £1,000 by the end of 2011 and a further review of fine levels in 2016.
- We will continue to fine aircraft that exceed the night time departure noise limit and introduce a tiered fining level starting at £1,000 per infringement, up to 3dB over this limit. For Infringements that exceed this 3dB threshold we will add £1,000 per dB
- We will continue to produce monthly reports to NATS detailing the adherence to the Joining Point criteria, as set out in the Stansted UK AIP for night operations
- We will continue to administer the DfT night restrictions regime and ensure that the number of operations and Noise Quota remains within the limits prescribed.

# 5.5 Mitigation schemes

The principal mitigation measure for aircraft noise impacts is the provision of acoustic insulation for properties. All of STAL's current noise insulation schemes are provided to meet the expectations of the Air Transport White Paper. This includes:

- Offer households subject to high levels of noise (69dBA Lea or more) assistance with the costs of relocating; and
- Offer acoustic insulation (applied to residential properties) to other noise-sensitive buildings, such as schools and hospitals, exposed to medium to high levels of noise (63dBA Leg or more).

When our Noise Action Plan was first published in 2011, of the 1,044 qualifying properties for noise insulation, 517 properties (c.50%) have taken up the scheme and STAL has provided in excess of £1.4 million of noise insulation since 2004. This has now increased to 648 properties (c.62%) with in excess of £1.6 million spent.

#### Wake Vortex

Wake Vortex are circulating currents of air caused by moving aircraft. They are created by all aircraft, whilst most are broken up by the natural flow of air before they reach the ground, occasionally they can reach building roof level. In some cases this can cause movement or slippage to tiles if the property is in extremely close proximity to the Airport Boundary and near the end of the runways. These occurrences are very rare at Stansted Airport. We have procedures in place to assess and rectify any damage that may have been caused by Stansted Operations.

- We will continue to implement our Residential Noise Insulation Scheme in line with our current planning obligations
- We will undertake a review and update our wake vortex policy by end of 2011 and review periodically
- We will continue to direct all money raised by noise and track infringements to the Stansted Airport Community Trust on an annual basis.

#### SECTION FIVE

# STANSTED AIRPORT'S NOISE STRATEGY

# 5.6 Monitoring and reporting

#### Noise and track monitoring

Stansted Airport has a dedicated noise and track keeping System (NTK), which takes radar data from air traffic control radars and combine it with flight information such as call sign, tail number, type and destination.

At Stansted Airport the Noise and Track Keeping (NTK) system captures data from both fixed and mobile noise monitors around the Airport, and matches this to operational data. Our NTK system is called Airport Noise and Operations Monitoring System (ANOMS). In 2006, Stansted Airport invested in this completely new Noise and Track Keeping computer system for Stansted. This provides state of the art technology and is part of STAL's continuing commitment to managing aircraft noise and track keeping.

Data from ANOMS is used by the CAA to produce noise contours for Stansted from their ANCON noise modelling system.

In order to respond to community concerns Stansted has a number of mobile community noise monitors. The NTKWG advises where these are best deployed in response to community concerns for an agreed period. These monitors capture all noise in the vicinity and by analysing the actual tracks of Stansted's aircraft for that same period, we can identify the noise that relates to a Stansted aircraft movement and noise that does not. When the end of the three month period is reached we share the results and engage an independent consultant to compile a report on the findings. These mobile noise monitor reports are given to the relevant Council for each area, as well as the local MP, and are available on our website. We have a rolling program of sites where the monitors are placed and this enables us to establish trends in noise levels.

#### WebTrak

In 2007, Stansted Airport's Flight Evaluation Unit launched WebTrak, a new online service that allows people to track a specific flight arriving or departing from Stansted within a 30mile radius of the Airport. Always looking to provide better

information to our local communities, WebTrak has since undergone several upgrades and we are now able to show data from our fixed noise monitors. The website helps people who want to know more about aircraft noise and track keeping issues in their local communities.

The site includes several features including the ability to make a noise enquiry or complaint online and users are provided with information about aircraft noise in their local communities. A map showing the geographical distribution of noise complaints is shown in Appendix F.

#### Reporting

Stansted Airport provides noise information to its Airport Consultative Committee, via the NTKWG, and on a weekly basis information to the Department for Transport on movements, noise quotas, details of any dispensations or exemptions granted, and reports on any movements by QC/8 and QC/16 aircraft during the night period. In addition, under section 78(4) of the Civil Aviation Act 1982 all dispensations granted by the Airports have to be reported to the Department for Transport (DfT) in writing within a maximum of one week from when the dispensed flight took place.

- We continue to record and investigate all complaints relating to aircraft operations
- We will set service level response targets for the handling of complaints and enquiries and will report against these targets
- We will continue to work with the NTKWG to develop our community noise monitoring program to help gain a greater understanding of the impacts and to facilitate solutions to local community noise concerns where feasible
- We will publish our progress against the Action Plan on an annual basis in our Corporate Responsibility Report.

# 5.7 Policy and planning

STAL has quarterly meetings with the Local Planning Authorities which are in close proximity to the Airport. Other developments in surrounding Counties and Districts are discussed where they may be affected by the Airport and aircraft noise. If it is then felt relevant both the Airport Safeguarding Team and STAL will respond to any planning application to highlight noise and other airport related issues.

# Action plan summary

- We will engage with the local planning authorities to ensure awareness of aircraft operations is considered in the development of sensitive land use, via the quarterly Local Authority liaison meeting
- We will commission forecast Leg contours for Air Noise annually in line with our current planning regulations
- We will review the annual Leg contours as produced by the DfT with Uttlesford District Council and agree upon actions arising
- We will work with the Government through ANMAC to clarify guidance on the definition of guiet areas in rural areas as related to Stansted Airport. This will include clarification around Areas of Outstanding Natural Beauty and "Tranquil" areas.

# 5.8 Continuous improvement

Stansted Airport has a track record of continually reviewing, improving and introducing new activities to mitigate the impact of noise. Some recent examples of this have been:

#### RNP1 Trial

London Stansted is delighted to be hosting the first UK based RNP1 departure trial. After agreeing a timeline for the CAA(DAP) to establish if the trial was technically feasible on two of our existing departure routes, 04 DOVER and 22 CLACTON, the trail commenced in May 2013. The initial results are extremely encouraging and are reported to the NTKWG. Required Navigational Performance with RF (RNP1)

exceeds the requirements of PRNAV. The track keeping we have seen so far on the two trial routes has been exceptional, showing a significant improvement with a tight concentration of tracks with a minimal lateral spread throughout the departure until vectored by ATC.

#### Single Engine Taxi

A coalition of aviation representatives, including Stansted Airport and easylet launched a new initiative (known as Single Engine Taxi) in October 2009 to cut aircraft noise, emissions and improve local air quality at airports. This new Departures Code of Practice promotes how aircraft can taxi to and from the runway with less than all engines operating, leading to significant reductions in ground noise, CO<sub>2</sub> and NOx emissions, depending on aircraft type and operator techniques.

Stansted Airport and easylet have instigated the trialling of this new technique and are now working together to determine how other airlines might best use the recommendations made in this code of practice.

#### Fixed Electrical Ground Power

In Section 6.3 we have detailed how STAL has been at the forefront of improving the use of FEGP to reduce ground noise at the Airport. In 2009, RyanAir purchased new planes which have the improved FEGP sockets which were developed with Boeing.

# Aircraft Noise Management Advisory Committee (ANMAC)

STAL is an active member of this group which is chaired by the DfT. It is an advisory and research group who's activities include improving noise monitoring and management.

### Ware Joining Point Trial

In 2013 after feedback from local representatives, STAL agreed to undertake an 8 week trial seeking to minimise the over-flight of Ware during the night period 23:30-06:00 from arriving aircraft. Full details of the trial and analysis can be found on the airports website. As the trial raised no local or operational issues, it has been agreed to conduct a further trial over a longer period to establish local ILS joining point rules that best fit our local communities

- We will continue to work with NATS and all stakeholders to implement new technologies as they become available
- We will continue to work with NATS. Director of Air Space Policy (DAP) and airlines to implement new navigation technologies as they become available
- We will prioritise airlines operating Chapter 4 aircraft when introducing new business to Stansted Airport
- We will consult with our airline partners during 2011 on the voluntary phase out of Chapter 3 high aircraft at Stansted Airport by 2015
- We will review the landing fee differential at least every
- We will establish and report a Stansted airline league table for noise and emissions based on compliance with noise abatement techniques, by the end of 2012
- In conjunction with Sustainable Aviation we will continue to seek to achieve the ACARE goal of 50% reduction in perceived external noise by 2020 based on new aircraft of 2020 (relative to equivalent new aircraft in 2000)
- Together with our partners in Sustainable Aviation we will develop a best practice guide for departures by the end of 2010 eg. Single Engine Taxiing
- We will update our procedures and policy documentation for monitoring aircraft operations and managing enquiries by the end of 2010
- We will request an annual audit of our noise management system by Uttlesford District Council
- We will continue to present issues and facilitate debate with ANMAC and will implement any initiatives as agreed through that forum.

#### SECTION FIVE

# STANSTED AIRPORT'S NOISE STRATEGY

### 5.9 Communication

Following the publication of this Strategy and Noise Action Plan, we will continue to keep communities and other stakeholders informed as to the progress being made. We are committed to reporting publicly on our performance against the Action Plan and the effectiveness of our actions to address community concerns. We will do this annually in our Corporate Responsibility Report.

#### Stakeholder communication and engagement

STAL has a number of ways in which it communicates its activities and noise information to stakeholders and the local community.

#### Stansted Airport Consultative Committee (STACC)

This committee meets quarterly to advise Stansted Airport Limited on:

- Any matters which it may refer to the Committee
- To consider any question in connection with the problems of the Airport as they affect the users and communities and organisations represented
- To make suggestions to the Managing Director on any matter connected with the administration of the Airport, which could further the interests of passengers, the local community and organisations represented
- To stimulate the interest of the local population in the achievements of the Airport.

This committee is made up of representatives of Stansted Airport, including the Managing Director, Head of Environment representatives from the Department for Transport, Local Councillors, County Councillors and local interest groups.

In 2011, the Stansted Airport Consultative Committee (STACC) decided to establish three sub groups to enable issues to be discussed in greater detail and focus. One of these groups was the Environmental Issues Group(EIG). Its main terms of reference were to consider the impact of the airport on the local community, the economy and the environment and, where appropriate, to make recommendations to the Committee. In particular the Group was asked to consider matters affecting

flight tracks, noise, air quality, the conservation and discharge of water, waste, surface transport, biodiversity, archaeology and climate change and, where appropriate, to make recommendations to the Committee. Accordingly EIG plays a key role in monitoring the noise impact on the local community and liases closely with the Airport Management Team and the Noise and Track Keeping Working Group.

More information on this committee can be found at http://www.stacc.info

#### Noise and Track Keeping Working Group (NTKWG)

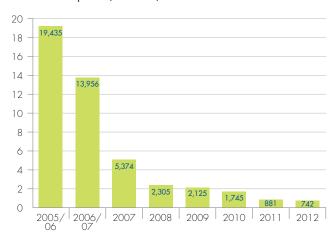

Members of the NTKWG are appointed by STAL, taking into account recommendations from STACC. The Group meets at least once prior to any STACC meeting. The membership of the NTKWG includes representatives from STAL, airlines, NATS, DFT and STACC.

The objectives of this group are as follows:

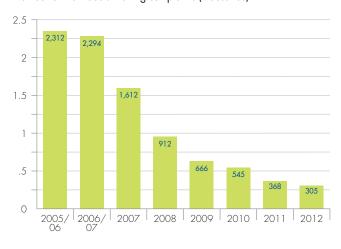

- To review the noise and track keeping output of the STAL Flight Evaluation Unit so as to ensure the considerations of the local community are taken into account
- To identify specific areas of concern so as to enable improved performance to be sought in particular elements of noise and track keeping
- To oversee the implementation of operational enhancements to the existing Noise and Track Keeping System (NTK)
- To ensure that the various elements of the system are used in a co-ordinated way to achieve the best overall benefit for the community
- To ensure the Groups activities remain within the overall framework of Noise management as determined by the DfT
- To improve the general understanding of noise and track keeping issues between the community, airlines and the Airport
- To provide the full committee of STACC with an overview of the activities of the NTKWG together with a statistical analysis of aircraft noise and track keeping.

This meeting is held at Stansted Airport quarterly.

#### Number of complaints (thousands)

#### Number of individuals making complaints (thousands)

#### Flight Operations Committee (FOC)

This committee meets quarterly and is chaired by the Head of Airside Operations from STAL, with representatives from Airlines. Ground Handling Agents, NATS and the Flight Evaluation Unit. The purpose is to discuss and resolve any operational issues that may arise and includes a Flight Evaluation Unit Report.

#### Mobile noise monitor briefings

Periodically we will conduct briefings to local communities where there has been a request for a Mobile Noise Monitor. This briefing will include a report on the data gathered from the Mobile Noise Monitor.

#### **Property Pack**

Stansted Airport Limited has also produced a "Property Pack" designed to help people who were considering coming to live near Stansted Airport or who wished to relocate locally. A recent review of the pack with Estate Agents has shown that they no longer require this information, although STAL continues to provide information to the public upon request.

#### Noise and environment seminar

Historically, London Stansted has held noise seminars to inform the local community, politicians and business partners about current developments and future plans within the aviation industry on noise, the environment, research and technology.

These events were an opportunity to update everyone about our work across the community to help better understand noise, and how the team at Stansted works to keep the intrusion to a minimum and we will look to repeat these events as part of a broader programme of community outreach.

#### Noise telephone line

This line is available to the general public to enquire and report noise 'events'. Since 2006, there has been a dramatic decrease in the number of complaints and the number of individuals making multiple calls.

# Ad-hoc engagements

STAL continues to engage stakeholders to promote better understanding of environmental issues eg. FEGP usage.

- We will review annually the benefit of London Stansted hosting a combined noise and environment seminar
- We will continue to seek feedback through the NTKWG on our noise management performance and take action to address any significant issues raised
- We will seek to establish a "best practice" forum to facilitate the sharing of aircraft noise management techniques between other airports
- We will continue to offer a range of contact options for complaints and enquires regarding aircraft noise including email, website and telephone contact options
- We will continue to provide public access to flight track information via our internet based WebTrak system
- We will invite local residents and complainants into the Airport to see first-hand the work of the FEU, explain our noise mitigation schemes and demonstrate our NTK system where we perceive there to be a benefit
- We will continue to record and investigate all complaints relating to aircraft operations and publish statistics
- We will annually review our communication material to ensure relevance and ease of understanding, based on feedback from the NTKWG and other stakeholder events.

# THE STANSTED NOISE ACTION PLAN

The development of the Noise Action Plan for Stansted is the next stage in the development of our Noise Strategy. STAL has introduced many measures to mitigate noise impact since 1999 which have been reviewed in previous sections. A number of these have already gone beyond the statutory requirements.

The development of Noise Action Plan has enabled us to review our progress and consider how we may now further develop a number of these measures and introduce new activities.

# Development of the plan

In 2009, STAL developed and consulted upon its draft Noise Action Plan in line with the European Directive and the published regulations.

Prior to the Draft Noise Action Plan being submitted for Public Consultation, a draft version of this document and our communications plan was sent to various stakeholders, Airlines, members of the Stansted Airport Consultative Committee (STACC), members of the Noise and Track Keeping Working Group (NTKWG), Local Councillors and Air Traffic Control, requesting their views.

The responses received were collated and where appropriate changes were incorporated into the Noise Action Plan. Much of the feedback made reference to the detailed nature of this plan, the industry terms used and acronyms used. We have addressed these issues with references, and a glossary of terms in Appendix B.

We have also produced a non-technical summary of this Noise Action Plan

# 2013 Update

In 2013, STAL received updated 2011 contour data from DEFRA in accordance with the requirements of the END. Recognising that our existing Noise Action Plan was only formally adopted in 2011, DEFRA required STAL to update the plan including a summary of the 2011 mapping. STAL was also required to consult on the revised and updated plan through at least the Airport Consultative Committee. STAL undertook a 3 week consultation through the Consultative Committee's sub group, the Environmental Issue Group in November 2013 and their comments and suggestions have been considered and included in the updated document where appropriate.

The EIG felt that the airport needed to demonstrate effective engagement with local communities affected by the airport's operations.

Consultation of the updated plan was limited to the Consultative Committee as this is an update to an existing plan that was only two years old. There have also been no significant infrastructure changes since this plan was first adopted in 2011. The approach taken by STAL was consistent with the contemporary guidance (Guidance for Airport Operators to produce noise action plans under the terms of the Environmental Noise (England) Regulations 2006 (as amended) July 2013) which suggests that 'it is envisaged that once the plan has been revised, it will be presented to the Airport's Consultative Committee for comment, and any other appropriate bodies depending on the extent and nature of the update.

The EIG said "Monitoring the airport's performance in meeting plan commitments is a key issue. EIG considers that there should be an effective monitoring process".

Stansted Airport has a transparent monitoring process in place as the commitments in the plan are independently audited and reported in the annual Corporate Sustainability Report. The EIG has been engaged in this process for a number of years and the auditors also present their findings annually to this group. STAL will continue to work closely with the EIG to ensure that the annual report meets their reporting needs.

The EIG felt the plan should clearly reflect progress made so far with a clear indication of commitments met and those that haven't and the reasons why.

This has been incorporated as part of this review, see sections 6 and 7.

The EIG general comments are listed below with STAL's response,

'Looking forward, there should be more information about future strategy especially in terms of how the noise impacts of arowth will be managed. EIG has previously registered its potential concern that new medium and long haul services might be operated by the noisier aircraft than the existing 'auiet' fleet operated by Ryanair and EasyJet'

Whilst we recognise that Stansted already has one of the youngest and quietest fleets of aircraft there is considerable scope for expansion in our present operation to our permitted planning consent. The Airport has Air Traffic Movement, contour size and Night Movement restrictions already in existence, and this is also backed up by charging that incentivises operating quieter aircraft through our conditions of use.

# THE STANSTED NOISE ACTION PLAN

'EIG would welcome the inclusion of a reference for consideration to be given to establishing an independent body to oversee noise impacts'

Whilst we see some merit in an independent body to oversee noise impacts, fundamentally we believe that noise is predominantly a local issue which is best addressed locally. To ensure that best practice is established and shared there are a number of important industry bodies such as Sustainable Aviation and the ANMAC Technical Working Group which bring together partners including Regulators, Government, Airports, NATS, Airlines, Airframe and Engine Manufacturers.

'The plan does not refer to helicopter noise. Although noise from overflying helicopters is not the direct responsibility of the airport, the operation of helicopters using the airport clearly falls within the airports remit. Accordingly the plan should set out how the noise from helicopters will be mitigated'

There are relatively few helicopter operations at London Stansted and they attract a small number of complaints each year. Helicopters operating at Stansted are the responsibility of the Airport and Operators alike. We maintain a watching brief and work with our helicopter operators should any issues arise. There are a set of restrictions in place such as the times of operation of the Helicopter Aiming Point (H), a set of Visual Reporting Points to keep traffic away from the most built up areas and restrictions on testing Helicopters.

'As the airport will be aware, the need to establish alternative metrics which properly reflect local noise impacts has been a particular source of concern. The draft does refer to alternative metrics but if this issue is to be progressed, the plan needs to set out clear objectives and timescales. Given that recent Government statements indicate that that the development of alternative metrics is seen as a local issue involving the airport and the local authority, the plan should set out how the airport proposes to engage with the relevant local authority and the local community'

This has been recognised in sections 5 and section 6 of this document.

'The night noise section should be updated to reflect the current Stage 2 consultation'

At the time of writing this update, the second stage of the Night Noise consultation has been launched which has been referenced in the document on pages 22 and 23.

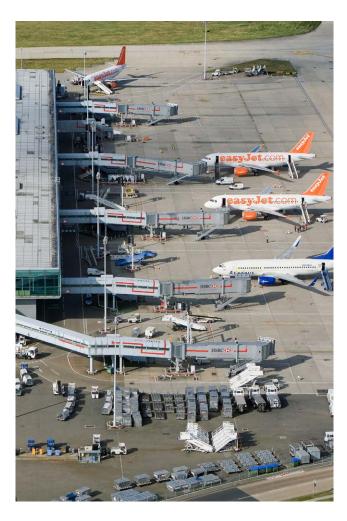

'Given that Stansted is a noise designated airport, EIG believes that there should be some comment from Government as to the effectiveness of the plan'

As a designated airport the UK Government sets a number of noise controls, including noise abatement and night noise objectives. We believe the ANMAC work streams are the best forum to address the effectiveness of these noise controls.

'There is no reference to the Ware Joining Point trial.'
This has now been included in section 5.8 of the updated plan.

A number of other textural changes have also been incorporated in this revised plan.

# 2009 public consultation

The Stansted Airport 16 week public consultation into its draft Noise Action Plan took place between Friday 12th June to Friday 2nd October 2009. The consultation period was subsequently extended by a few days to allow some Parish Councils to submit their responses following Parish Council meetings. The consultation process was managed by GfK NOP, an independent research organisation. The public were able to respond to the consultation via an online survey accessed via the Airport's website, via hard copy questionnaire or via "white mail" sent direct to GfK NOP.

### Promoting the consultation

Stansted Airport used various channels of communication to ensure the public consultation was well advertised in the local and regional community, namely:

- Postcards were sent to about 4,500 local residents who live within the 55dBA Lden noise contour around the Airport
- Letters were sent to 31 noise sensitive buildings within the 55dBA Lden noise contour. This included chapels, churches, clinics, day-care centres, dental surgeries, higher education buildings, hospitals, pre-school education, primary schools, schools and surgeries
- Letters were sent to approximately 700 members of the local community who have had cause to complain about aircraft noise at Stansted since January 2008
- Regional TV and local radio interviews were conducted to cover the launch and importance of the consultation
- Three waves of press advertisements were run in local and regional newspapers before, during and towards the end of the consultation period

- Home page links to the consultation were shown on the Stansted Airport main web site (www.stanstedairport.com) and Stansted's dedicated Noise web site (www.stanstedairport. com/noise) along with a non-technical summary of the proposed actions
- A dedicated hotline was provided to allow members of the public to request hard copies of the consultation material or to ask questions about the draft Noise Action Plan. This generated 139 requests for consultation paperwork.

# Getting out into the community

STAL hosted eight public road shows in local towns during the consultation period. The events provided an opportunity for the local public to discuss the draft Noise Action Plan and learn more about how Stansted Airport manages aircraft noise (Table 7):

When	Where	Attendees (approx.)
5 Aug 09	The Priory, Ware, Herts	60
13 Aug 09	Charis Centre, Bishop's Stortford, Herts	10
20 Aug 09	Foakes Hall, Great Dunmow, Essex	30
26 Aug 09	Town Hall, Sudbury, Suffolk	40
3 Sept 09	Latton Bush Centre, Harlow, Essex	10
8 Sept 09	Town Hall, Saffron Walden, Essex	50
17 Sept 09	Arts Centre, Haverhill, Suffolk	10
23 Sept 09	Town Hall, Braintree, Essex	20

Table 7: Location of consultation events

These sessions were advertised in local and regional newspapers. Press releases were also issued in the week prior to each public road show session.

# THE STANSTED NOISE ACTION PLAN

#### Wider communications

Before and during the consultation, the Airport also proactively engaged with:

- Stansted's Noise and Track-keeping Working Group
- The Stansted Airport Consultative Committee
- Stansted's Flight Operations Committee
- Environmental Health Officers for Uttlesford, Braintree, East Herts, Herts County and Essex County councils
- Over 9,000 subscribers to Stansted's "Meaning Business" e-newsletter
- Known anti-airport lobby groups
- Letters written to MPs, MEPs CEOs & Clerks of Town Councils.

# Consultation findings

# Who responded?

Stansted Airport received more responses to the public consultation than any other BAA airport. The breakdown on method of response for Stansted Airport is shown in Table 8.

Airport	Total	Online survey	Postal survey	White mail
Stansted	410	247	156	7

Table 8: Breakdown of method of response

Respondents were asked, as part of the survey, how much of the draft Noise Action plan they had read or looked at. Over three-quarters of respondents said they had looked at all or most of it (77%) whilst only a small minority (1%) responded that they had looked at hardly any or none of the Plan.

A full breakdown of responses by respondent type and method of completion is shown in Table 9. In Appendix I a full list of respondents who wished their names to be known are shown.

# Generic responses

GfK NOP made specific comment in their report that some 170 respondents used generic language.

# Key themes arising

The frequency of responses that mentioned key themes arising from the response to the Stansted consultation are listed in the Table 10; detailed responses to the five questions asked as part of the consultation are shown in Appendix G.

# Top key themes:

- Draft plan does not go far enough/fails to address the problem
- Performance indicators proposed are not sufficient/too vague
- Draft plan offers nothing new
- Draft plan does not do enough to address night time noise
- Draft plan does not fulfil the END requirements
- Fines/penalties are inadequate
- Proposed actions need to be quicker/immediate/ time frame is too long.

Respondent type	Total	Online survey	Postal survey	White mail*
Local resident/individual	352	221	130	1
A private sector organisation	7	3	3	1
Interest or pressure group	9	3	4	2
Local Government	33	16	14	3
Other public sector organisation	2	1	1	0
Voluntary sector or charity	3	2	1	0
Other	4	1	3	0
TOTAL	410	247	156	7

Table 9: Stansted Airport – summary of responses

# Our response to key themes

'Draft plan does not go far enough/fails to address the problem'
Feedback would indicate that respondents felt the Airport
was planning to do too much monitoring and reporting, and
not enough direct action. Also, the proposals that the Airport
seeks to explore new initiatives to help tackle aircraft noise
appear to be perceived as somewhat loose.

For over a decade. Stansted has been at the forefront of pro-actively monitoring and tackling noise issues, so for us it is very much about building upon the solid foundations we already have in place.

However, in light of the feedback received we have reviewed our actions. This has resulted in over 20 new actions that London Stansted is committed to introduce over the lifetime of this five-year plan. These include tougher penalties for airlines that persistently fly off track and tighter timescales for change.

We believe that the actions in this Action Plan are appropriate considering the challenge the Airport has to operate a safe, successful and realistic operation within the parameters set by Government and regulatory bodies. Stansted Airport will continue to develop this Plan in future years and build on actions that are within our control

'Performance indicators proposed are not sufficient/too vague'

The Airport has reviewed and where possible enhanced the proposed indicators detailed within the draft Action Plan to provide clearer explanations and to be more specific.

# 'Draft plan offers nothing new'

Stansted's draft Noise Action Plan was not simply about introducing brand new initiatives, but to highlight in one document all measures that the Airport will either continue with, or adopt, over the next five years in order to help better manage aircraft noise in the local community.

The Airport has a very proud record of what it has been able to achieve to-date in helping tackle aircraft noise in the community. This Plan builds upon that sound foundation and recognises that complacency is not an option.

The action plan has in excess of 20 new initiatives including:

- Increasing fine levels for persistently off track flying
- A tiered fining level for noise infringements
- Increased fining levels for night time noise and off track infringements
- Introduction of continuous descent arrivals to runway 04
- Monitoring of no fly zones
- Introduction of new technologies and procedures.

Sufficiency of plan (overall)	
Plan does not go far enough/fails to address the problem	81%
Performance indicators used are not sufficient/too vague	56%
Plan offers nothing new	50%
Plan does not fulfil the END requirements	45%
There are no penalties if the goals in the plan are not met	41%
Plan does not cover a large enough area	37%
Plan should include helicopter noise	31%
Plan does not address the actual effects on local residents	23%
Plan does not recognise that the number of aircraft movements is what matters	12%
Plan does not meet the WHO guidelines to community noise	11%
Plan is based on inaccurate assumptions/data	
Contours are averages/Average noise is not a good measure/does not represent actual disturbance	14%
Criticisms of specific areas of the plan	
Does not do enough to address night time noise	49%
Fines/penalties are inadequate	44%
Action needs to be quicker/immediate/time frame is too long	42%
Arrivals noise issues are not addressed/issues with descent trajectories	12%
Suggested actions	
Off-track planes need addressing/monitoring	34%
Action plan should be enforced by way of sanctions/penalties/airlines should be fined appropriately	16%
Incentives to encourage use of quieter planes	13%
Should restrict night flights/stop night flights	12%
Noise should be monitored over a greater area/measure all areas affected by noise	10%
Criticism of consultation process	
Plan/noise regulation should be determined/monitored by an independent body	45%
Plan is written by BAA/is biased/serves their interests/justifies increases in flights	6%
Other/General comments	
Noise is difficult to live with/disturbs sleep/affects me directly – general comment	28%
Noise abatement should take priority over emissions	26%
It is impossible for members of the public to check any claims made by BAA	13%

Table 10: Frequency of response answers

SECTION SIX

# THE STANSTED NOISE ACTION PLAN

'Draft plan does not do enough to address night time noise'

Stansted Airport operates on a 24 hour basis and is heavily regulated by the Government on night movements and noise quota counts in both Winter and Summer seasons for night time flights between 23:30-06:00.

However, the Airport is also mindful of the inconvenience these operations can sometimes cause local residents, and that is why there will be an improved fining system for aircraft that fly persistently outside the Noise Preferential Routes or exceed Government noise limits during this night time period.

#### 'Draft plan does not fulfil the END requirements'

It is our firm opinion that the Noise Action Plan does meet the Environmental Noise Directive requirements.

Prior to public consultation, the Airport engaged key stakeholders to ensure that there was agreement on the validity of the draft Action Plan. This included members of local government, the NTKWG and NATS.

### 'Fines/penalties are inadequate'

There will be an improved fining system for aircraft that fly persistently outside the Noise Preferential Routes. Penalties will be harsher during the night shoulder, and night, period in recognition of the need to reduce night noise.

The surcharge level is currently £500 per infringement. The Airport will increase this surcharge during the Night Period 23:0007:00 to £1,000 per infringement by the end of 2010.

The Airport currently fines all Aircraft that exceed the night time departure noise limit of 87dB(A), and the night "shoulder period" limit of 89dB(A), £500 for each infringement up to 3dB over this limit. Noise infringements over 3dB are currently fined £1,000. We will introduce a new tiered fining level starting at £1,000 per infringement, up to 3dB over this limit. For Infringements that exceed this 3dB threshold we will add £1,000 per dB. As now, all fine monies will be passed to the Stansted Airport Community Fund for distribution into the local community.

# 'Proposed actions needs to be quicker/immediate/time frame is too long'

The Noise Action Plan covers a five year period. It is neither practical nor achievable to deliver all actions in year one. However, where possible, the Airport has brought forward several actions to now commence in 2010 and 2011.

# THE NOISE ACTION PLAN

This Noise Action Plan has now been extended to cover the period to 2018 after being originally adopted in 2011 and since updated in 2013.

The Plan includes actions which relate only to development the Airport has planning permission for at the time of publication and in line with the guidance makes reference to:

- Noise created by aircraft approaching, taking off from the Airport, taxiing aircraft and engine testing carried out within the Airport perimeter. By considering the last two areas STAL has gone beyond the legal requirement
- The 2006 and 2011 Lden noise contours as published by DEFRA
- Takes into account the responses received from the 2009 consultation and the 2013 EIG consultation.

The detailed aspects of each action point are set out in Table 11 and are grouped by the themes set out in Section 6 of this document. Our new actions have been highlighted in bold text.

well setup our noise and the Keeping system to monitor overflights of St Elizabeth's Howe will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (Ys194N) 0000525) or an order to help clarify the trade-off between noise and mack keeping system to monitor overflights of St Elizabeth's Home (Ys194N) 0000525) or an order to help clarify the conductors.  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (Ys194N) 0000525) or an order to help clarify the conductors regarding use of Noise Abotement Departure, we will lobby through AnNAC to clarify guidance for aircraft operators regarding use of Noise Abotement Departure, we will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (Ys194N) 0000525) or an altitude of less than 4,000f (Stansted OkhH).  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (Ys194N) 0000525) or an altitude of less than 2,500ft.  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (Ys194N) 0000525) or an altitude of less than 2,500ft.  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (Ys194N) 0000525) or an altitude of less than 2,500ft.  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Mountifichet at an altitude of less than 2,500ft.  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Mountifichet at an altitude of less than 2,500ft.  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Mountifichet at an altitude of less than 2,500ft.  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Mountifichet at an altitude of less than 2,500ft.  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Moun	Action 1 – Departing Aircraft, to minimise the noise impact of aircraft departures	Timescale	Performance indicator	Numbers affected See Tables 1-5 Page 14-15
We currently fine all Aircraft that exceed the daylime departure noise limit of 94dB(A) £500 for each infringement up to 3dB over this limit. Over 3dB infringements are currently fined £1,000. We will introduce a tiered fining level starting of £1,000 per infringements are currently fined £1,000. We will introduce a tiered fining level starting of the \$250 per dB also see Action 4 Night Noise.  We will setup our noise and track keeping system to monitor overflights of Bishop's Stortford. UKAIP EGSS AD 2.21 (3[9]) Aircraft using this aerodrome shall maintain as high an altitude as practicable, shall avoid flying over Bishop's Stortford. Any Aircraft overflying Bishop's Stortford will be classed as "off track" unless any valid safety reason applies.  In order to help darify the trade-off between noise and emissions on departure, we will lobby through ANNAC to clarify guidance for aircraft operators regarding use of Noise Abatement Departure Procedures (NADP) at Stansted Airport.  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (*514949N 0000523E) at an altitude of less than 4,000ft (Stansted QNH).  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (*514949N 0000523E) at an altitude of less than 4,000ft (Stansted QNH).  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (*514949N 0000523E) at an altitude of less than 1,000ft (Stansted QNH).  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home (*514949N 0000523E) at an altitude of less than 1,000ft (Stansted QNH).  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Mounflitchet. UKAIP EGSS AD 2.21 (3[9]) Aircraft using this aerodrome shall maintain as high an altitude as practicable, shall avoid flying over St Elizabeth's floated when the standard mounflitchet at an altitude of less than 1,000ft (Stansted Nounflitchet) and stansted Mounfl		Ongoing	Preferential Route. (2006 baseline: 4,000 ft = 97.19%; 3,000 ft = 99.52%). Actual performance will be reported annually via our Corporate	>7400 Lden
3dB over this limit. Over 3dB infringements are currently fined £1,000. We will introduce a tiered fining level starting at £1,000 per infringement, up to 3dB over this limit. For Infringements that exceed this 3dB threshold we will add £250 per dB also see Action 4 Night Noise.  We will setup our noise and track keeping system to monitor overflights of Bishop's Stortford. UKAIP EGSS AD 2.21 (3(9)) Aircraft using this aerodrome shall maintain as high an altitude as practicable, shall avoid flying over Bishop's Stortford. Any Aircraft overflying Bishop's Stortford will be classed as "off thrack" altered five reason applied and the control of the Summer 2011 Season and beyond.  2011  Summer 2011 Season and beyond.  5800  Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.  5800  Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.  5800  Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.  5800  Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.  5800  Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.  5800  Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.  5800  Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.  5800  Implementation of new noise infringements for the Summer 2011 Season and beyond.  5800  Implementation of new noise infringements for the Summer 2011 Season and beyond.  5800  18	We will continue to fine aircraft that fly persistently outside the Noise Preferential Routes. The surcharge level is currently £500 per infringement. We will increase this surcharge level to £750 per infringement during 2011 and review in 2016.		No or Aircraft departure surcharges applied/year.	>4500 Lday
Aircraft using this aerodrome shall maintain as high an altitude as practicable, shall avoid flying over Bishop's Stortford.  Any Aircraft overflying Bishop's Stortford will be classed as "off track" unless any valid safety reason applies.  In order to help clarify the trade-off between noise and emissions on departure, we will lobby through ANMAC to clarify guidance for aircraft operators regarding use of Noise Abatement Departure Procedures (NADP) at Stansted Airport.  We will work with NATS and the CAA to establish Service Level Agreements to respond to suggestions for improved flight procedures.  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home, UKAIP EGSS AD 2.21 (3(9)) Aircraft using this aerodrome shall maintain as high an altitude as practicable, shall avoid flying over St Elizabeth's Home (*514949N 0000523E) at an altitude of less than 4,000ft (Stansted QNH).  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Mountflitchet. UKAIP EGSS AD 2.21 (3(9)) Aircraft using this aerodrome shall maintain as high an altitude as practicable, shall avoid flying over Sawbridgeworth and Stansted Mountflitchet at an altitude of less than 2,500ft.  We currently monitor and will continue to monitor aircraft that do not meet the 1,000ft criteria as described in the UKAIP EGSS AD 2.21 Noise Abatement Procedures (3(1)). After take-off the aircraft shall be operated in such a way that it is at a height of not less than 1,000ft AAI (above airfield level) at 6.5km from start of roll as measured along the departure track of the aircraft. This will be reported through the FOC and NTKVMG. (2006 baseline: No data available). Actual performance will be reported annually via our Corporate Responsibility Report.	3dB over this limit. Over 3dB infringements are currently fined £1,000. We will introduce a tiered fining level starting at £1,000 per infringement, up to 3dB over this limit. For Infringements that exceed this 3dB threshold we will add £250	2011	Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.	5800 Lday
We will work with NATS and the CAA to establish Service Level Agreements to respond to suggestions for improved flight procedures.  We will setup our noise and track keeping system to monitor overflights of St Elizabeth's Home, UKAIP EGSS AD 2.21 (3(9)) Aircraft using this aerodrome shall maintain as high an altitude as practicable, shall avoid flying over St Elizabeth's Home (*514949N 0000523E) at an altitude of less than 4,000ft (Stansted QNH).  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Mountfitchet. UKAIP EGSS AD 2.21 (3(9)) Aircraft using this aerodrome shall maintain as high an altitude as practicable, shall avoid flying over St Elizabeth's Home (*514949N 0000523E) at an altitude of less than 4,000ft (Stansted QNH).  We will setup our noise and track keeping system to monitor overflights of Sawbridgeworth and Stansted Mountfitchet. Table 11: Noise Action Plan Achieved Not achieved

# THE STANSTED NOISE ACTION PLAN

Action 2 – Arriving Aircraft, to minimise the noise impact of aircraft arrivals	Timescale	Performance indicator	Numbers affected See Tables 1-5 Page 14-15
We will continue to promote, monitor, seek to improve and report on adherence to the Arrival Noise Abatement procedures detailed in the Stansted UKAIP. We will continue to monitor and report the adherence to Continuous Descent Approach procedures as detailed in UKAIP EGSS AD 2.21 Noise Abatement Procedures, where the aircraft is approaching the aerodrome to land on Runway 22 it shall commensurate descent with its ATC clearance minimise noise disturbance by the use of continuous descent and low power, low drag operating procedures This is to avoid prolonged periods of level flight and keep aircraft as high as possible for as long as possible.	Ongoing	Percentage of aircraft within each individual Noise Preferential Route.	>7400 Lden
We will continue to produce monthly reports to NATS detailing the adherence to the Joining Point criteria for daytime operations as set out in the Stansted UKAIP.	Ongoing	Monthly reports provided to NATS.	>7400 Lden
We will work with Local Communities to influence NATS to introduce Continuous Descent Approaches to Runway 04.	2012 Ongoing	Introduction of CDA criteria to Runway 04.	>7400 Lden
We will continue to work with Airlines and NATS to encourage CDA's to Runway 04 where operationally feasible, especially during the night period.	2010-2012 Ongoing	% achievement of CDA by time period.	>7400 Lden
We will report on our progress to achieve CDA's to Runway 04 through the Stansted Airport Consultative Committee (STACC).	Quarterly	Introduction of CDA's to Runway 04.	>7400 Lden
We will work with Local Communities and regulators to seek opportunities for minimum heights over particular sensitive areas near the Airport.	Ongoing	Percentage of CDA achievement. Percentage meeting ILS joining point criteria.	>7400 Lden
Action 3 – Ground Noise, to minimise the noise impact of aircraft ground movements and engine running	Timescale	Performance indicator	Numbers affected See Tables 1-5 Page 14-15
We will review and update our APU usage strategy annually and implement any changes necessary.	2010 Annually	Report compliance with APU controls/restrictions.	<100 Lden
We will continue to monitor adherence and review the effectiveness of our stringent ground noise operational controls, as detailed in our Directors Notices. The current controls are set out below,  1. Control of Ground Noise for Fixed Wing Aircraft Engines  2. Control of Ground Noise for Rotary Wing Aircraft  3. APU/GPU Restrictions of Use.	Annually	Number of non compliant engine tests (number, location, duration) and APU non-compliance. (2006 baseline: No data available). Actual performance will be reported annually via our Corporate Responsibility Report.	<300 Lden
We will undertake a review in 2011 of our stand planning procedures to identify any opportunities to prioritise stand allocation so as to minimise ground noise impacts. A subsequent review will be undertaken every 2 years afterwards.	2011, 2013, 2015, 2017	Number of aircraft on ground noise sensitive stands during noise sensitive periods.	<300 Lden
We will work with airlines and NATS to achieve 50% of arriving aircraft using reduced engine taxi-in procedures by 2015.	2015	Increase in single engine taxi-in to 50%.	<300 Lden
We will work with our Airlines to achieve 90% of all Aircraft Turnarounds using FEGP's rather than APU's by 2015.	2015	90% FEGP useage during aircraft Turnaround. (2006 baseline: No data available). Actual performance will be reported annually via our Corporate Responsibility Report from 2011 onwards.	<300 Lden

Table 11: Noise Action Plan continued

Not achieved

Action 4 – Night Noise, to minimise the noise impact of aircraft operations during the Night Period 23:00-07:00	Timescale	Performance indicator	Numbers affected See Tables 1-5 Page 14-15	
We will continue to fine aircraft that fly persistently outside the Noise Preferential Routes. The surcharge level is currently $\pounds 500$ per infringement. We will increase this surcharge during the Night Period 23:00-07:00 to £1,000 per infringement in 2011.	2011 2016	No or Aircraft departure surcharges applied/year.	5900 Lnight	
We currently fine all Aircraft that exceed the night time departure noise limit of $87dB(A)$ , and the night "shoulder period" limit of $89dB(A)$ , £500 for each infringement up to 3dB over this limit. Over 3dB infringements are currently fined £1,000. We will introduce a tiered fining level starting at £1,000 per infringement, up to 3dB over this limit. For Infringements that exceed this 3dB threshold we will add £1,000 per dB.	2011	Implementation of new noise infringements scheme for the Summer 2011 Season and beyond.	5900 Lnight	
We will continue to produce monthly reports to NATS detailing the adherence to the Joining Point criteria as set out in the Stansted UKAIP for Night operations.	Ongoing	Monthly reports provided to NATS against our targets of 93% joining the ILS outside 10 nm and 98% joining above 3,000ft QNH. (2006 baseline: No data available).		
We will continue to administer the DfT night restrictions regime and ensure that the number of operations and noise quota remains within the limits prescribed.	Ongoing	Publish Usage report each season, report Weekly to DfT and ACL, and report useage through the NTKWG.	6800 Lnight	
We will review Stansted's departure noise limits through the Government advisory committee, ANMAC.		Revised set of departure noise limits	>7400 Lden	
Action 5 – Mitigation Schemes, to help mitigate the noise impact of aircraft operations	Timescale	Performance indicator	Numbers affected See Tables 1-6 Page 13	
		Number of applications received vs number processed.		
We will undertake a review and update our wake vortex policy.		Number of properties subjected to vortex strikes.	<100 Lden	
We will annually direct all money raised by noise and track infringements to the Stansted Airport Community Trust.	Annually	Number of infringements and fines raised published in FEU/CR report.		
able 11: Noise Action Plan continued				

# THE STANSTED NOISE ACTION PLAN

Action 6 – Monitoring and Reporting, to report against our commitments to managing noise	Timescale	Performance indicator	Numbers affected See Tables 1-5 Page 14-15
We will continue to record and investigate all complaints relating to aircraft operations and publish statistics in line with agreed complaints handling policy.	Quarterly/ Annually	Number of callers, contacts and events by month. Quarterly via STACC and annually via Corporate Responsibility Report.	
From 2011 we will set service level response targets for the handling of complaints and enquiries and will report against these targets.	From 2011	Agree targets through NTKWG and report quarterly to this forum and annually in the CR Report. (2006 baseline: No data available).	
Through our work with NTKWG we will continue our community noise monitoring program to help gain greater understanding of the impacts in communities affected by Stansted operations.	Ongoing	Number of community noise reports.	
We will publish our progress against the Action Plan on an annual basis.	Annually	Annual Monitoring Report, no of actions complete, Report through NTKWG, STACC and our Corporate Responsibility Report.	
Action 7 – Policy and Planning, Influencing planning policy to minimise the number of noise sensitive properties around our airport	Timescale	Performance indicator	Numbers affected See Tables 1-5 Page 14-15
We will engage with the local planning authorities to ensure awareness of aircraft operations is considered in land use development, via the quarterly Local Authority liaison meeting.	Ongoing	Number of interactions with LPA.	
We will commission forecast 57 dB(A) Leq contours in line with our current planning regulations.	Annually	Submission of contours on time.	
	2010	Actions from Meeting.	
We will review the annual Leq contours as produced by the DfT with Uttlesford District Council and agree upon actions arising.	Annually		

Table 11: Noise Action Plan continued

Action 8 – Continuous Improvement, to further improve our understanding of noise through a collaborative approach with our airline partners and stakeholders to introduce new technologies	Timescale	Performance indicator	Numbers affected See Tables 1-5 Page 14-15
We will continue to work with NATS and all stakeholders to implement new technologies as they become available, eg. Collaborative Decision Making (CDM).	2015	Introduction of CDM and other best practices.	>7400 Lden
We will continue to work with NATS, DAP and all stakeholders to implement new technologies as they become available, eg. RNAV and PRNAV, (Precision Area Navigation). We aim to have a PRNAV departure solution on all 6 departure routes by 2015.	2015	Increase in percentage of Aircraft flying "on" track upon any changes in departure procedures, deliver PRNAV departures on all 6 departure routes.	>7400 Lden
We will prioritise airlines operating Chapter 4 aircraft when introducing new business to Stansted Airport by the end of 2010 by offering a 40% discount in airport landing charges compared to that of a Chapter 3 High aircraft.	2010	Track the annual percentage of Chapter 4 operations Annual Contours.	>7400 Lden
We will consult with our airline partners during 2011 on the voluntary phase out of Chapter 3 high aircraft at Stansted Airport by 2015.		Track the annual percentage of Chapter 3 High operations against the 2009 benchmark of 0.09% of total ATMs. (2006 baseline: No data available).	>7400 Lden
		Actual performance will be reported annually via our Corporate Responsibility Report from 2011 onwards.	>/ 400 Edell
We will review the landing fee differential at least every 3 years commencing in 2010, in order to create incentives for operators to use the quietest possible aircraft within their fleet. This is to encourage the use of quieter aircraft. Eg. similar size aircraft within different noise categories are charged different fees.	2010 2013, 2016	Conditions of use documents changes in charging. Track percentage within different charging categories.	>7400 Lden
We will establish and report a Stansted Airline league table for noise and emissions based on compliance with noise abatement techniques by 2012.	2012	League table of ranking from amalgamation of agreed indicators.	>7400 Lden
In conjunction with our partners in Sustainable Aviation we will continue to seek through advances in technology, (based on new aircraft in 2020 relative to equivalent new aircraft in 2000) to achieve the ACARE goal of 50% reduction in perceived external noise by 2020 based on new aircraft of 2020 relative to equivalent new aircraft in 2000.	Ongoing	Measured reduction in perceived external noise.	>7400 Lden
gether with our partners in Sustainable Aviation we will develop a best practice guide for departures . Single Engine Taxiing. We will report our progress against this.		Publication of DCOP, Number of documents circulated.	
We will annually review our communication material to ensure relevance and ease of understanding.	Annually	Feedback from Communication Material published/issued.	
We will update our procedures and policy documentation for monitoring aircraft operations and managing enquiries following the installation of the ANOMS NTK system by the end of 2010.	Annually	Current Procedures manual.	
We will implement a change program for our noise management structure that enables us to enhance the quality of the service provided by the FEU by the end of 2010.	2010	Feedback through NTKWG and FOC.	
We will request an annual audit of our noise management system.	Ongoing	Feedback from audit.	
We will continue to present issues and facilitate debate with ANMAC and will implement any initiatives as agreed through that forum.	Ongoing	Minutes of ANMAC. Feedback to STACC.	

Table 11: Noise Action Plan continued

# THE STANSTED NOISE ACTION PLAN

Action 9 - Effective Communication, to provide meaningful communication to stakeholders, community representatives and the public	Timescale	Performance indicator	Numbers affected See Tables 1-5 Page 14-15
will review annually the benefit of London Stansted hosting a combined noise and environment seminar.		No's in attendance and feedback from Noise and Environment Seminar.	>7400 lden
We will continue to work through the NTKWG to facilitate solutions to local community noise concerns where feasible.	Quarterly	Key messages from NTKWG.	>7400 Lden
We will continue to seek feedback through the NTKWG on our noise management performance and take action to address any significant issues raised.	Quarterly	Key messages for STACC.	>7400 lden
We will seek to establish a "best practice" forum to facilitate the sharing of aircraft noise management techniques between other airports.	2012	FEU Quarterly Reports and papers delivered on time.	
We will continue to offer a range of contact options for complaints and enquires regarding aircraft noise including email, website and telephone contact options.	Ongoing	Number of contacts by contact method.	
We will continue to provide public access to flight track information (delayed by 24 hours) via WebTrak.	Ongoing	% availability of WebTrak.	
We will invite local residents and complainants into the Airport to see first-hand the work of the FEU, explain our noise mitigation schemes and demonstrate our NTK system where we perceive there to be a benefit.	Ongoing	No of Invitees to the Flight Evaluation Unit.	
We will undertake to review and amend as appropriate the Directors Notices relating to noise management.	Annually	Number of Directors Notices reviewed/amended.	
We will annually review our communication material to ensure relevance and ease of understanding, based on feedback from the NTKWG and other stakeholder events.	Annually	Feedback from Communication Material published/issued.	
We will work with our Consultative Committee to establish ideas for revised metrics to better describe noise impacts.	2016	Agreed metrics/publication of metrics	
We will engage with our local communities and consultative committee as the London Airspace Management Project evolves.	2018	Feedback from community and consultative committee engagement with respect to future LAMP developments	

Table 11: Noise Action Plan continued

# **OUR PERFORMANCE**

We will use a set of performance indicators (Table 12) to monitor our progress against each action point, to ensure that the work we are undertaking is resulting in the maximum benefit in terms of managing noise impacts. We have included figures for 2006 (where available) against our key performance indicators, in order to set a baseline for the future.

Our performance against these indicators will be regularly reviewed internally through our environmental governance structure. During the five-year period of this Action Plan, we may add to or amend the range of performance indicators to respond to improvements which enable us to better manage the Airport noise impacts.

We will publish our performance against the key performance indicators in our annual Corporate Responsibility Report.

Since the formal adoption of our Noise Action plan in 2011 London Stansted has made significant progress in delivering the actions within the Plan. It is acknowledged that the plan is still in its infancy, being only two years since adoption, but many of the objectives and commitments within it have already been achieved.

Reference number	Key performance indicator	2006 baseline	2011 baseline
KP1	Percentage of Chapter 4 (or equivalent) Aircraft	75%	94%
KP2	Population inside the 55dBA Lden contour (km²)	9400	7400
KP3	Population inside the 48dB Lnight contour	6800	5900
KP4	Area inside the 57dB Leq16 hour daytime summer contour to not exceed 33.9 (km²)	28.2	21.2
KP5	Number of infringements of the Daytime departure noise limit	9	2
KP6	Number of infringements of the Night time departure noise limit	24	22
KP7	Percentage of aircraft achieving a CDA (24 hour period) on Runway 22	82.82%	94.42%
KP8	Percentage of aircraft on track (all routes)	98.10	99.07%
KP9	Number of individuals making noise related complaints	2294	368
KP10	Percent of noise related enquiries responded to within 8 working days	N/A	86.85

Table 12: Key Performance Indicators

## **OUR PERFORMANCE**

### **Departing Aircraft**

We continue to work with airlines to achieve greater track keeping compliance. Our most recent 2012 data shows that the 4,000ft NPR's achieved compliance of 98.30% and the two 3,000ft NPR's were at 99.83%. We continue to fine airlines that fly persistently or flagrantly off-track and we have also raised these fine levels and we intend to review these levels again in 2016.

We have also raised our fining levels for aircraft that exceed the departure noise limits, now starting at £1000 per infringement and introduced a tiered fining mechanism that is weighted so the highest exceedances pay the most.

In 2011 we configured our dedicated Noise and Track Keeping System to monitor all the AIP detailed No Fly Zones. This data is reported to the NTKWG representatives at their quarterly meetings and any suggestions acted upon. This has highlighted on a number of occasions that these over flights can be from arriving aircraft. The data and feedback is welcomed by NATS.

ANMAC has since reformed and London Stansted is represented at this forum including representation from STACC. We believe this provides the airport and local communities a platform for influencing guidance in respect of noise verses emissions trade-offs.

We agreed a timeline (SLA) with the CAA ahead of the commencement of the RNP1 trial. This resulted in a commitment from the CAA to look into the feasibility of developing an RNP1 departure trial on two of our departure routes within 2 months. The CAA achieved this which has since led to the development of the RNP1 trial which commenced in May 2013.

The 1000ft rule as detailed in the UKAIP is now the subject of an ANMAC technical working group to ascertain future noise abatement procedures.

We have now added a new action to review the departure noise limits through the ANMAC technical working group.

### **Arriving Aircraft**

We now report against an annual target for CDA compliance. Our most recent data shows this is steadily improving with a 94.63% compliance rate in 2012.

We have not achieved implementation of CDA's to runway 04 as they are still not possible due to current airspace constraints. We anticipate the LAMP project as being the enabler for CDA's to Runway 04 and monitor and report to NATS night time CDA performance to runway 04. We recognise that this still remains a key priority for our local communities affected by runway 04 arriving aircraft and will continue to work towards achieving this implementation.

However, we agreed to report the night time CDA compliance on Runway 04 to NATS on a monthly basis as airspace is generally quieter at night with more opportunity to fly a CDA. This is often showing a compliance rate in excess of 70%.

We continue to produce detailed monthly Joining Point statistics for NATS for night and daytime arrivals and work with them to achieve greater compliance.

### **Ground Noise**

Our Directors Notices have been republished reinforcing the control of ground noise along with the Directors Notices relating to engine testing for fixed and rotary wing aircraft. These DN's limit the time, duration and location that any testing can occur

Our stand planning system has been replaced with a new system, CHROMA. This provided an opportunity to review our stand planning which is prioritised for the most efficient operation. We will continue to review our policies to ensure the most efficient operation.

Many of our operators are currently adopting reduced engine taxiing procedures. This can be largely dependent on airframe and the close proximity from runway exit to parking stand can often limit this practice due to the requirements of engine cooling.

## Night Noise

We have increased the surcharge level for night operations that persistently fly outside the Noise Preferential Routes and will review this level again in 2016.

As previously mentioned STAL has introduced a tiered fining system and increased the base level of fines for aircraft which exceed the departure Noise Limits. This is also weighted for night operations so as the noisiest departures are fined the most. Currently the largest fine levied has been  $\pounds5000.00$ . This has influenced operators to review the engine fit on the same airframe type flying late night operations where there are multiple options available and to look into replacing the operation with a quieter, more modern aircraft.

As stated earlier, we will review the departure noise limits through the ANMAC technical working group. We continue to report weekly our compliance to the Governments Night Noise regime.

### Mitigation Schemes

Our Noise Insulation Scheme has been maintained and has continued to receive applications and this has now increased to a 62% take up from qualifying properties.

We have reviewed our wake vortex policy which is now published on the Stansted Airport website.

All monies surcharged to airlines in respect of noise and track keeping infringements are directed to the Stansted Airport Community Trust on an annual basis.

### Monitoring and Reporting

We continue to investigate all complaints and in 2011 agreed target response times with the NTKWG. Our response time performance is presented quarterly at these meetings along with our complaints statistics. We also present an annual complaints analysis report to the NTKWG representatives.

Our long standing community noise monitoring program continues with most recent studies undertaken at Wareside and Saffron Walden. The results and analysis in these reports are published on the Stansted Airport website.

We report on our Noise Action Plan targets in the annual Corporate Sustainability Report. This report is independently audited and presented to the EIG.

### Policy and Planning

Our quarterly meetings with local planning authorities remain a valuable mechanism for awareness of airport related activities.

This is also provides the airport with the opportunity to discuss the forecast and actual 57dB(A) contours as produced by the ERCD and an update on aerodrome safe guarding as appropriate. As previously stated, ANMAC has commenced its workstreams and we welcome guidance in respect of the protection of any AONB and tranquil areas.

We have removed a separate action we feel is not related to noise mitigation. This was to offer an annual course on gerodrome safeguarding for Local Planning Officers. We meet with our Local Planning Authority on a quarterly basis and feel this is best placed to raise awareness of Aerodrome Safeguarding.

### Continuous Improvement

London Stansted is delighted to be hosting the first UK based RNP1 departure trial. After agreeing a timeline for the CAA(DAP) to establish if the trial was technically feasible on two of our existing departure routes, 04 DOVER and 22 CLACTON. the trail commenced in May 2013. The initial results are extremely encouraging and are reported to the NTKWG. Required Navigational Performance with RF (RNP1) exceeds the requirements of PRNAV. The results we have seen so far on the two trial routes has been exceptional and shows significant improvement in accurate track keeping with a variety of aircraft types included in the trial. It is our intention to implement RNP1 departure routes on a permanent basis following.

Our charging mechanism continues to set a minimum differential in excess of 40% for Chapter 4 aircraft compared to similar Chapter 3 high aircraft. This is reviewed

As a signatory to the Sustainable Aviation Departures Code of Practice we will continue to promote this industry best practice.

In 2012 we have established a league table for Noise Abatement compliance in respect of noise abatement procedures in the UKAIP, Noise, 1000ft, CDA and track keeping. This annual report is published on the Stansted Airport website.

Since the development of the original noise action plan, we have undertaken an annual audit of our Noise Management System. We have invited the FIG to ligise with the auditors to establish a clear set of audit objectives. The results of the audits have been reviewed and acted upon where appropriate.

### Effective Communication

Our website has undergone significant changes and enhancements. Our Webtrak service has also undergone similar improvements, including the display of noise monitor readings, general speed and responsiveness of the service and options for replay speeds.

We have developed and published a suite of factsheets covering a wide range of aviation topics and publish our mobile noise community noise monitoring reports. Detailed arrival and departure maps are also produced and published every two years and we regularly review and update our Directors Notices relating to noise management.

As previously mentioned, Stansted airport and our now parent company M.A.G are both signatories to Sustainable Aviation. This has proved an ideal forum to facilitate sharing of best practices and noise management techniques between other airports and aircraft operators.

We meet with our NTKWG representatives on a quarterly basis to address community concerns and work together to improve the overall noise impacts of airport operations.

We have continued to invite local resident and interested parties to the airport to see first-hand the work of the FEU and how noise controls are implemented and enforced. We are disappointed that not all those we have invited have taken to opportunity to visit us.

We have added two new actions to this section, "To work with our Consultative Committee to establish ideas for revised metrics to better describe noise impacts" and "To engage our Local Communities and Consultative Committee as the London Airspace Management Project evolves". We will report on our progress against these new actions in the future.

## CONSULTATION QUESTIONNAIRE

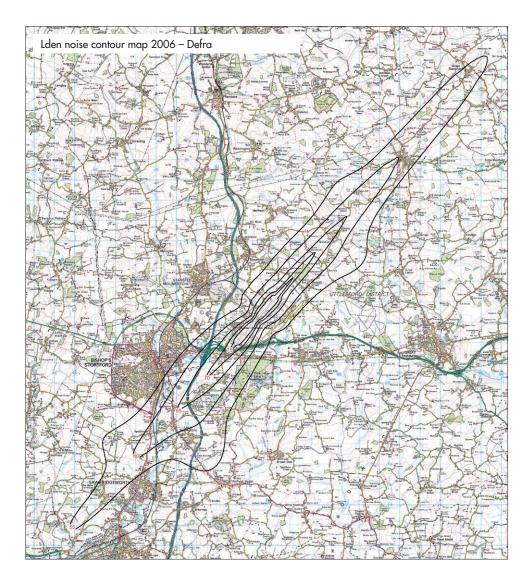

We would welcome your comments on our proposals and invite your views on the following questions. The responses we receive will be used to influence the detail of the final action plan. Responses to this consultation document do not indicate endorsement of present or future airport operations.

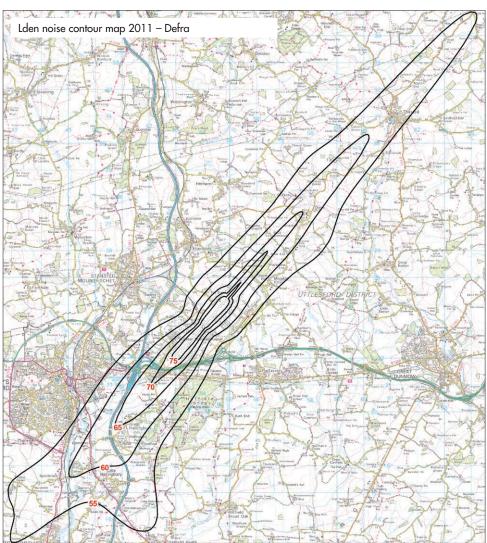

- 1. To what extent do you think that Stansted Airport Limited's noise strategies outlined in this draft noise action plan are targeting the most important problems in relation to aircraft noise?
- 2. To what extent do you think that the draft noise action plan provides a suitable framework to manage aircraft noise?
- 3. The draft noise action plan proposes a number of performance indicators to measure progress in implementing the action plan. To what extent do you think that these performance indicators are sufficient?
- 4. Stansted Airport's long-term goal is to be in the top fifth of airport companies for best practice in international airport noise management on comparable sites. To what extent do you think that this goal is sufficiently challenging?
- 5. Do you have any other comments on Stansted Airport's draft Noise Action Plan?
- 6. Are you happy to have you details recorded/reported

## SUMMARY OF CONSULTATION RESPONSES

To what extent do you think that BAA Stansted's noise strategies outlined in the draft noise action plan are targeting the most important problems in relation to aircraft noise?

### **Findings**

Only a small minority of respondents thought that BAA Stansted's noise strategies outlined in the draft noise action plan were "completely" targeting the most important problems in relation to aircraft noise (3%). Responses given by over half of respondents (56%) when asked "Why is that?" centred around the insufficiency of the plan, in that it didn't go far enough or that it failed to address the problem.

"The plan is very short on specific actions to be taken to reduce noise, relying on 'monitoring', 'promoting', and 'seek' types of actions which are not firm quantifiable commitments."

#### (Local resident/individual)

More specifically, respondents thought that the plan didn't do enough to address night time noise (43%) and that the fines or penalties proposed were inadequate for aircraft breaching noise limits (41%).

"The plan needs to go further in specific, quantifiable actions to reduce noise, particularly at night, and for helicopters."

#### (Numerous mentions)

"The strategy says little about reducing night flight noise and frequency, which is when the noise impact is most acutely felt."

#### (Local resident/individual)

"Fines for noisy and off-track aircraft should be much higher than at present to stimulate better practices." (Numerous mentions) These concerns were reflected in some of the solutions, for example, restricting night flights [7%] and providing incentives for the use of quieter planes (12%).

"Specific action measures to reduce the number of flights, particularly at night are needed. There should be a ban on all night flying between 12.30pm and 5.50am."

#### (Local resident/individual)

"It would be good to see incentives to airlines for the introduction of substantially less noisy aircrafts."

#### (Local resident/individual)

"It is imperative that measures are included to cover helicopter noise, which is becoming an increasing irritant in rural areas. Minimum heights and lower speeds should be introduced for helicopters to reduce noise and downbeat shockwayes."

#### (Local Government)

In addition, six per cent commented that issues with *arrivals noise and descent trajectories* were not suitably addressed by the noise action plan.

A quarter of respondents (24%) considered that noise abatement should take priority over emissions.

Eighteen per cent made general comments relating to the fact that noise affects them directly, is difficult to live with and *disturbs their sleep*.

Q2 To what extent do you think that the draft noise action plan provides a suitable framework to manage aircraft noise?

### **Findings**

One in seven respondents felt that to some extent the draft noise action plan provided a suitable framework to manage aircraft noise, with a small minority (3%) saying "completely" and around a tenth (12%) saying "partially".

Like Q1, when asked "Why is that?" around half of all respondents thought that the plan *didn't go far enough or failed to address the problem* (53%) and a similar proportion considered that it *offered nothing new* (49%).

"This draft plan mainly refers to measures that already exist. I regard these measures as totally inadequate."

#### (Local resident/individual)

"It doesn't go far enough! The language isn't strong enough, talking to airlines is unlikely to make little progress. Hit them hard financially or ban them from the Airport if they break the rules."

#### (Local resident/individual)

"The plan does not offer any additional actions to reduce noise over those that are already in place. More quantifiable targets and time scales are needed to make the plan effective. Comparisons of 'before' and 'after' implementation of the plan need to be added."

(Numerous mentions)

Concerns of numerous respondents appeared to be related to how the plan was to be enforced or regulated.

Around two-fifths of respondents were concerned that there was no mention of penalties if the goals in the plan are not met (39%) and a similar proportion thought that the plan/noise regulation should be determined or monitored by an independent body (43%).

"There should be quantifiable sanctions if BAA fails to meet the targets. There needs to be an independent overseer (rather than BAA or DfT) to represent the interests of the local community and ensure harmful noise exposure is addressed as set out in the Environmental Noise Directive."

#### (Numerous mentions)

"There is insufficient independent regulation and the plan has insufficiently new, radical initiatives to make a difference."

#### (Local resident/individual)

Almost a third of respondents (29%) made the point that action needs to be quicker/immediate or that the time frame is too long.

"The plans are not ongoing. They should have targets and timescales, with sanctions if these are not met." (Local resident/individual)

There were also some criticisms that the plan did not provide a suitable framework because it didn't address the actual effects on local residents (mentioned by nine per cent of respondents). This perception has perhaps arisen in relation to the data or assumptions on which the plan is based, as some respondents thought that the plan is based on inaccurate predictions (7%) and that contours are averages and average noise is not a good measure as they do not represent actual disturbance (9%).

"It fails to use impact on public as the key criterion: Time averaged noise levels do not reflect the actual disruption caused by peak noise. Summer noise is far more disruptive to most residents as windows are open. Night time noise is simply unacceptable."

(Local resident/individual)

The draft noise action plan proposes a number of performance indicators to measure progress in implementing the action plan. To what extent do you think that these performance indicators are sufficient?

### **Findings**

Only a minority of respondents thought that the proposed performance indicators were sufficient, with a very small proportion saying "completely" sufficient (3%), and around one in ten (9%) saying they were "fairly sufficient".

The majority of respondents thought the performance indicators weren't sufficient, with seven in ten (69%) saying "not very sufficient" and just under a fifth (18%) saving "not at all sufficient".

Again, one of the main criticisms of the plan was that it did not go far enough or that it failed to address the problem (60%). Specific comments in relation to the performance indicators used were that they are insufficient and too vaque (56%).

"The performance indicators used are limited." vague and give too much room for inaction. It is not good enough to simply "review" or "track" issues when the Environmental Noise Directive requires noise to be reduced, especially if flight numbers at Stansted increase."

#### (Numerous mentions)

Around one in ten respondents (11%) thought that the performance indicators in the plan were insufficient as they did not contribute to addressing the actual effects on local residents.

"The performance indicators proposed by BAA for aircraft movements only record what happens (eg. track the number of noise infringements). There are no indicators proposed that actually establish noise reduction targets and measure progress. Estimates of the reduction of the number of people affected (annoyed, sleep disturbed, or other) are not provided." (Numerous mentions)

"The indicators provided are reactive rather than proactive. Estimates of the reduction of the number of people affected are not provided, therefore, this base level strategy appears to be skewed from the start."

#### (Local Government)

Further comments relating to the proposed indicators were that the time frame appeared to be too long (11% of respondents).

"There is a lack of definite timescales." (Numerous mentions)

As part of its objective to limit and where possible reduce the impacts of aircraft noise, Stansted has set a benchmark goal to be in the top fifth of airport companies for best practice in international airport noise management on comparable sites. To what extent do you think that this goal is sufficiently challenging?

### **Findings**

Less than one in ten respondents felt that Stansted Airport's goal to be in the top fifth of airport companies for best practice in international noise management on comparable sites presented a challenge. Just one per cent thought it was "too challenging" and six per cent thought it "sufficiently challenging".

Around one in seven respondents thought this goal was "not very challenging" whilst the majority, threequarters (75%) considered it "not at all challenging". Over half of all respondents (56%) expressed concern that the top fifth agal set by Stansted would not in itself reduce noise and that this should be the sole objective of the Noise Action Plan.

"This objective/benchmark goal does not in itself reduce noise. The Environmental Noise Directive is there to 'avoid, prevent or reduce noise' and these should be the sole objective of the Action Plan." (Numerous mentions)

Other comments centred upon comprehension and verification of the goal set by Stansted, as some respondents were unsure what the comparison group was or how the claim compared with what other sites do (12%), or said it was impossible for members of the public to check any claims made

"Are you saying you will be in the top 5 for rurally located airports? What is best practise for these and how does it compare to best practice for an airport like Heathrow? "

#### (Local resident/ individual)

by BAA (12%).

"Without knowledge of 'comparable sites', I have no standard by which to make a judgement"

### (Local resident/ individual)

"International benchmarking is a vague and imprecise concept and it would be virtually impossible for members of the public to check any such claims made by the Airport operator."

(Numerous mentions)

Do you have any other comments on Stansted Airport's draft noise action plan?

NOTE: White mail responses which did not respond to the specific consultation questions have also been included here.

### **Findings**

Numerous criticisms centred upon the plan being insufficient, namely in that it didn't go far enough or that it failed to address the problem (19%)

"Not very comprehensive. Does not address the problem which really affects local people. Bit of a PR stunt you are not going to do anything to really reduce noise if it affects your business in any way."

#### (Local resident/ individual)

"It is vague, unchallenging and pays little attention to the local mainly rural nature of the area closest to the Airport"

#### (Local resident/ individual)

Other comments about the insufficiency of the plan (each mentioned by fewer than ten per cent of respondents) were that the proposals were window dressing and the plan was too loose to be of value (9%)

"It does not show much real concern for the people suffering from aircraft noise. Window dressing comes to mind."

#### (Local resident/ individual)

Almost one in ten said that it didn't address the actual effects on local residents (9%), that it didn't do enough to address *night time noise* (5%) or that arrivals noise issues and issues with descent trajectories were not addressed (5%)

"I would like to see BAA pushing NATS to make CDA a high priority for arrivals over Hertford, Ware, Hoddesden and Harlow irrespective of expansion plans. Flights should stick to their allocated times much better and not be allowed to overrun the 23:30 deadline without paying severe penalty fines." (Local resident/ individual)

# CURRENT EXPENDITURE ON NOISE MANAGEMENT

Туре	Description	Approximate annual cost
Staff costs	Comms Team, Airside Team, FEU, Strategy Environment Team – salary and training.	£150,000
Computer and equipment costs	Renewal, calibration, repair, Software licences, support development.	£200,000
Publications and communications	Seminars, documents, website.	£20,000
Fines	Departure noise limits and off track departures, (to be paid to Stansted Community Trust).	£5,000
Noise insulation and mitigation schemes	Insulation, relocation, community buildings, and wake vortex.	£200,000
Research and benchmarking, forecasting	Future contours, support for omega, Sustainable Aviation etc, studies for benchmarking.	£20,000
Audit and consultancy	Community monitor schemes, Ground noise surveys etc.	£20,000
